Driver Information

Supported Features

- Supports the Emulex OCe10100 family of UCNAs
- Supports dynamic and permanent driver parameter setting using the OneCommand™ Manager application, version 5, from Emulex. This is a GUI and CLI-based configuration utility used as part of a master kit, enabling driver configuration including:
 - Out-of-band (TCP/IP) remote SAN management capability
 - Diagnostics (loopback and diagnostic dump [except for OCe1010x])
 - LUN (logical unit number) masking
 - Virtual port (VPort) support

See the OneCommand Manager User Manual for a complete list of supported features.

- Supports the following protocols:
 - NIC
 - FCoE (Fibre Channel over Ethernet)
 - iSCSI
 - Fibre Channel initiator mode
 - SCSI-FCP
 - FCP-2
- SNIA-CTP compliant SMI-S 1.1 Provider
- Supports the following topologies:
 - FC-AL (Fibre Channel Arbitrated Loop) (For non-UCNA adapters only)
 - Point-to-point
 - Fabric with auto-topology negotiation
- Supports FC in-band management
- Supports 1, 2, 4, 8, and 10-Gb/s capable adapters with auto-rate negotiation. (1 Gb/s is not supported on 8 Gb/s adapters.)
- Support for Common HBA API
- Batch firmware download capability
- PCI hot-plug support (vendor specific)
- VPD (Vital Product Data) support
- NPIV (N_Port ID Virtualization) support

New Features in this Release

- Supports the Emulex OCe10100 family of UCNAs
- Supports FC/FCoE
- Supports NIC
- Supports the OneCommand Manager application

Prerequisites

- There are no prerequisites at this time.

Compatibility

- For a list of adapters that are compatible with this driver, see the driver Downloads page on the Emulex Web site. For compatible firmware versions, see the Downloads page for the specific adapter.

Things to Know Before You Download

- The driver is matched to a particular version of the Emulex Core Kit, the OCe10100 firmware, and the NIC driver. Refer to the Downloads page on the Emulex Web site for details.

Known Issues

- See the product release notes for the latest information.

Installing the FC/FCoE Driver

Introduction

This part of the guide provides installation and troubleshooting information for the Emulex OneCommand™ Manager application using the FC/FCoE interface. Before using this product, you need a working knowledge of FC/FCoE, TOE (TCP Offload Engine) technology, and the fundamentals of network storage devices.

Installing the FC/FCoE Driver and Management Software

The Emulex 8.2.x driver is available through the VMware support site. Refer to the VMware support Web site for further details.

See the OneCommand Manager Command Line User Interface Manual for instructions on how to install on the ESXCOS.

Note: Before installing the Emulex elxocmcore kit, you must install the lpfc driver from the VMware Web site.

Note: Before installing OneConnect network driver and management software, verify that the firmware version is current. If it is, proceed with the installation. If it is not, update the firmware using the OneCommand Manager application and reboot your system before proceeding with the installation.

Uninstalling the FC/FCoE Driver

See the VMware Patch Download page for instructions.

Installing the FC/FCoE Utilities

Follow these instructions to install the OneCommand Manager CLI.

To install the OneCommand Manager agent:

1. Log in as 'root.'
2. Copy the `elxocmcore-esx41-<kit version>.x86_64.rpm` file to a directory on the install machine.
3. CD to the directory to which you copied the RPM file.
4. Install the RPM file. Type:

```
rpm -U elxocmcore-esx41-<kit version>.x86_64.rpm
```

For example:

```
rpm -U elxocmcore-esx41-5.0.643.6-1.x86_64.rpm
```

The RPM file contents are installed in `/usr/sbin/hbanyware`. The CLI utility is also located in this directory.

Note: For VMware ESX Server systems, the firewall on the ESX Server must be opened to manage systems remotely using TCP/IP. To enable TCP port #23333, run the following commands:

```
esxcfg-firewall --openPort 23333,tcp,in,onecommand  
esxcfg-firewall --openPort 23333,tcp,out,onecommand
```

To verify that the correct port is open, run the following command:

```
esxcfg-firewall -q
```

The TCP port number can be changed. The default is 23333. Refer to the VMware Server Configuration Guide for more details on how to configure the ESX firewall.

Uninstalling the FC/FCoE Utilities

Follow these instructions to uninstall the Emulex configuration utilities. To uninstall the OneCommand Manager agent:

1. Log in as 'root.'
2. Type `"rpm -qa | grep elx"` to verify that this kit is installed. This command should list `"elxocmcore-esx41-<kit version>"` for the current release.
3. Type:

```
rpm -e elxocmcore-esx41-<kit version>
```

Installing the NIC and iSCSI Drivers

Introduction

This part of the guide provides installation and troubleshooting information for the Emulex OneConnect UCNA. Before using this product, you need a working knowledge of the NIC (network interface card), TOE (TCP offload engine) technology, iSCSI, and the fundamentals of network-storage devices.

Installing the NIC and iSCSI Drivers and Management Software

The Emulex NIC and iSCSI drivers for VMware ESX 4.1 are available through the VMware support site. The VMware support Web site also includes a documentation link to the correct installation procedures for this driver. Follow the installation instructions provided on the VMware support Web site.

See the OneCommand Manager Command Line User Manual for instructions on installing the Emulex core kit.

Note: Before installing the Emulex elxocmcore kit, you must install the lpfc driver from the VMware Web site.

Note: 1. Install the OneConnect network driver.
2. Install the OneConnect iSCSI driver.
3. Update the lpfc driver.
4. Install or update the Emulex core kit.
5. Update the firmware.
6. Reboot the system.

Uninstalling the NIC and iSCSI Drivers

See the VMware support site for instructions.

Virtualization Features

For the best performance, you must install VMware Tools in each guest operating system. For information on installing VMware Tools in a Linux or Windows guest operating system, refer to the VMware ESX Server 4.1 documentation.

Enabling the NetQueue Feature

To use the multiple interface feature in ESX Server, you must enable the NetQueue feature. It is disabled by default.

- To check if NetQueue is enabled, run the following command from the ESX Server console:

```
# esxcfg-advcfg -j netNetqueueEnabled
```

If it prints 'netNetqueueEnabled = FALSE', the feature is disabled.
- To enable NetQueue, run the following command:

```
# esxcfg-advcfg -k TRUE netNetqueueEnabled
```

Reboot the ESX Server for the change to take effect.

Creating and Naming Interfaces in ESX Server

The NIC driver supports a maximum of four UCNAs per system. For dual-channel UCNAs running in standard operating mode, the driver creates two interfaces (one for each physical port). The first and second interfaces are respectively named vmnic0 and vmnic1 (assuming there are no other network interfaces in your configuration). The same applies to virtual NIC (vNIC)-capable UCNAs when vNIC mode is disabled in the adapter BIOS (for those boards that support vNIC).

When vNIC mode is enabled in the adapter BIOS, the driver creates eight interfaces (four for each physical port). The interfaces are labeled vmnic0 through vmnic7 (assuming there are no other network interfaces in your configuration). All eight vNICs are fully functional and support the same feature set as a standard NIC. The vNICs can also be linked to a virtual switch in the same way:

```
# esxcfg-nics -l //list recognized nics
# esxcfg-vswitch -l //list available vswitches
# esxcfg-vswitch -a vSwitch0 //create vSwitch0
# esxcfg-vswitch -A VMNet0 vSwitch0 //create virtual machine
network, VMNet0 and add it to vSwitch0
# esxcfg-vswitch -L vmnic0 vSwitch0 //link vmnic0 to vSwitch0
```

The only difference being that in vNIC mode, each of the four vNICs tied to a physical port share the port's 10GbE bandwidth.

Configuring VLANs

The OneCommand Manager application supports VLAN filtering in the hardware. To configure VLANs on a OneConnect interface, create the vSwitch with the required VLAN ID and use this interface as an adapter to this vSwitch. A native VLAN can also be configured in the guest operating system in VGT (Virtual Guest Tagging) mode. (For example, using vconfig in the Linux guest operating system.)

Configuring Network Heap Size in ESX Server

By default, the ESX Server network stack allocates 64MB of buffers to handle network data. Even if the network load requires more than 64MB of memory, the OneConnect driver cannot allocate it. When this happens, the driver logs messages in the file /proc/vmware/log indicating that the alloc_skb() call failed. This impacts network performance considerably.

- To read the current size of the network heap, run:

```
# esxcfg-advcfg -j netPktHeapMaxSize
netPktHeapMaxSize = 0
#
```
- If the default value of 64MB is in effect, this command shows the size as 0. If any other value is in effect, the command prints that value.
- For example, to set the heap size to 128MB, run the command:

```
# esxcfg-advcfg -k 128 netPktHeapMaxSize
# esxcfg-advcfg -j netPktHeapMaxSize
netPktHeapMaxSize = 128
#
```

The new value takes effect after a reboot.

Interrogating the NIC Driver

To get information on the installed NIC driver, enter:

```
esxupdate query --vib-view | grep be2net
```

This is a sample output:

```
[root@blade10]# esxupdate query --vib-view | grep be2net
cross_vmware-esx-drivers-net-be2net_400.2.102.225.12-1.0.4.164009
installed 2010-04-05T11:28:38.540372-07:00
cross_vmware-esx-drivers-net-be2net_400.2.102.200.10-1.0.4.164009
retired 2010-03-18T13:59:02.520994-07:00
```

Configuration

Introduction to FC/FCoE Configuration

You can configure the driver parameters using native ESX tools or the Emulex OneCommand Manager application. This document describes how to configure parameters using native ESX tools. For a more comprehensive description of ESX tools, refer to the current documents for VMware ESX 4.1 on the VMware public Web site. If you have further questions, contact a VMware technical support representative. Refer to the Emulex OneCommand Manager User Manual for more information about the utility.

Temporary FC/FCoE Configuration Methods Using Native ESX Tools

There are four ways to configure the driver parameters:

- Permanent (global)
- Permanent (per adapter)
- Temporary (global)
- Temporary (per adapter)

Note: The OneCommand Manager application, version 5.0 also supports all four ways to configure driver parameters. This is the preferred method of setting configuration parameters. Refer to the OneCommand Manager 5.0 User Manual for more information.

Permanent FC/FCoE Configuration Methods Using Native ESX Tools

Permanent configuration requires that the new values be saved in the ESX environment. These changes are considered permanent because they stay in effect across system reboots.

To make changes that impact all adapters in the system (global changes), follow these steps. See “FC/FCoE Driver Configuration Parameters” on page 8 for parameter names and values. Parameter values are in both hexadecimal and decimal.

1. From the Console Operating System (COS) terminal window type:

```
esxcfg-module -s "param=value param2=value..." <driver_name>
```

The <driver_name> is obtained from the `vmkload_mod -l` call. Look for the “lpfc” prefix.
2. Reboot the server. Type:

```
reboot
```

Note: VMware does not officially support unloading the driver via `vmkload_mod -u`. If you must unload the driver, contact VMware technical support.

Note: NPIV port creation and deletion are performed by the VMware vSphere client or Virtual Center Server. Refer to the VMware documentation for more information.

Example of Permanent Global Configuration

The following example sets `lun_queue_depth` (the maximum number of commands that can be sent to a single LUN) to 20 (default is 30) for all Emulex adapters in your system.

1. Locate the parameter `lpfc_lun_queue_depth` in Table 1 on page 8.

2. Set the permanent value. Type:

```
esxcfg-module -s "lpfc_lun_queue_depth=20" lpfc820
```

3. Reboot the server. Type:

```
reboot
```

The new setting is used when the driver reloads.

To verify the setting type:

```
esxcfg-module -g lpfc820
```

Example of Permanent Per-Adapter Configuration

The following example sets `lun_queue_depth` to 20 (default is 30) for adapter #1.

1. Set the adapter-specific value. Type:

```
esxcfg-module -s "lpfc1_lun_queue_depth=20" lpfc820
```

2. Reboot the server. Type:

```
reboot
```

The new setting is used when the driver reloads.

To verify the setting type:

```
esxcfg-module -g lpfc820
```

The following example sets `lun_queue_depth` to 20 (default is 30) for adapter #1 and `lun_queue_depth` to 10 (default is 30) for adapter #2.

1. Set the adapter-specific value. Type:

```
esxcfg-module -s "lpfc1_lun_queue_depth=20  
lpfc2_lun_queue_depth=10" lpfc820
```

Note: Type the command all on one line without a carriage return.

2. Reboot the server. Type:

```
reboot
```

The new settings are used when the driver reloads.

To verify the settings type:

```
esxcfg-module -g lpfc820
```

Dynamically Adding LUNs and Targets

For instructions on dynamically adding LUNs and targets, refer to the “Using Rescan” section of the VMware SAN Config documentation.

Emulex FC/FCoE Driver Configuration Parameters

All adapter-specific parameters have an `lpfcX_` prefix (where `X` is the driver instance number). For example, setting `lpfc0_lun_queue_depth=20` makes 20 the default maximum number of commands that can be sent to a single logical unit (disk) for `lpfc` instance 0.

Dynamic parameters do not require a system reboot for changes to take effect.

Table 1: FC/FCoE Driver Configuration Parameters

Variable	Default	Min	Max	Dynamic	Comments
lpfc_hba_queue_depth	8192	32	8192	No	Maximum number of FCP commands that can queue to an Emulex adapter. The value cannot exceed what the adapter supports.
lpfc_ack0	0	0=Off	1=On	No	Use ACK0 for class 2.
lpfc_discovery_threads	32	1	64	No	Specifies the maximum number of PLOGI commands that can be outstanding for a discovery.
lpfc_fcp_class	3	2	3	No	FC class for FCP data transmission.
lpfc_fdmi_on	0	0	2	Yes	(0) disabled (1) support FDMI without attribute of hostname (2) support FDMI with attribute of hostname
lpfc_link_speed	0	0=auto select 1=1 Gb/s 2=2 Gb/s 4=4 Gb/s 8=8 Gb/s		No	Sets link speed. Note: Not supported for FCoE.
lpfc_log_verbose	0x0	0x0	0x7ffffff	Yes	Extra activity logging (bit mask).
lpfc_lun_queue_depth	30	1	128	Yes	Default max commands sent to a single logical unit (disk).
lpfc_max_scsicmpl_time	0	0	60000	Yes	Limits SCSI command completion time (in mS) to control I/O queue depth. The default (0) means the SCSI layer maintains control.
lpfc_pci_max_read	0	0 = driver default 512 = 512 bytes 1024 = 1024 bytes 2048 = 2048 bytes 4096 = 4096 bytes		No	The maximum number of bytes transferred per pci DMA read. The default value (0) means the driver automatically determines the correct value. This parameter applies to Emulex PCI-X adapters only.
lpfc_scan_down	1	0=Off	1=On	No	Select a method for scanning ALPA to assign a SCSI ID.

Table 1: FC/FCoE Driver Configuration Parameters (Continued)

Variable	Default	Min	Max	Dynamic	Comments
lpfc_tgt_queue_depth	8192	10	8192	No	Default maximum number of commands sent to a single target.
lpfc_topology	0	0x0=loop then P2P 0x1=internal loopback 0x2=P2P only 0x4=loop only 0x6=P2P then loop		No	FC link topology. (Defaults to loop. If that fails, the driver attempts to link in point-to-point mode). Note: Not supported for FCoE.
lpfc_use_adisc	0	0=Off	1=On	Yes	Send ADISC instead of Port Login (PLOGI) for device discovery or Registered State Change Notification (RSCN).
lpfc_devloss_tmo	10	1	255	Yes	Number of seconds a remote port can drop from the SAN before that port is removed from the driver.
lpfc_use_msi	0	0 = use INTX (min) 1 = use MSI 2 = use MSI-X (max)		No	Selects which interrupt mode to use. By default, the driver uses INTX. VMware guidance is to use MSI-X, but MSI is available.
lpfc_fcp_wq_count	4	1	31	No	Configures the number of fast-path work queues used by the host and port.
lpfc_fcp_eq_count	4	1	7	No	Configures the number of fast-path event queues used by the host and port.
lpfc_sg_seg_count	64	64	256	No	Configures the maximum number of scatter-gather elements the driver accepts in a single SCSI command.

Creating a Fibre Channel Remote Boot Disk

For instructions on creating a Fibre Channel remote boot disk, refer to the VMware SAN configuration documentation, “Chapter 6, Using Boot from SAN with ESX Server Systems.”

Working with Virtual Ports (VPorts)

Creating, Deleting and Displaying VPorts

The Emulex driver for VMware supports NPIV by default. The only management API for creating and deleting a VPort and creating an NPIV-enabled virtual machine comes from ESX. VPorts in the driver discover the fabric just like physical ports do, and are subject to the same SAN delays. As the number of VPorts increases, the amount of time it takes to complete remote port discovery increases. This is because the VPorts are created sequentially and each VPort executes discovery synchronously. If your NPIV-enabled virtual machines power-on automatically, powering on could take longer than usual. This is normal for NPIV virtual machines.

Note: Ensure you are using the latest recommended firmware for VPort functionality. Check the Emulex Web site for the latest firmware.

Note: Loop devices and NPIV are not supported on the same port at the same time. If you are running a loop topology and you create a VPort, the VPort's link state is *offline*. VMware ESX supports only fabric mode.

Note: You can create VPorts only on 4 Gb/s, 8 Gb/s, and OneConnect adapters. You cannot create VPorts on 1 Gb/s or 2 Gb/s adapters.

Note: The OneCommand Manager application sees all VPorts created by the driver, but the application has read-only access to them.

NIC Network Driver Performance Tuning

Network driver performance tuning improves performance of the network and the TCP Offload driver. The OneConnect Universal Converged Network Adapter (UCNA) is an x8, Generation 2 ("Gen 2", or Gen2) PCI-Express (PCIe) device and requires substantial system-memory bandwidth to support 10 Gb/s data streams.

Using vmxnet Emulation, Enabling Jumbo Frames, and TSO

The OneConnect UCNA supports jumbo frames and TSO, both of which are necessary to achieve optimal performance with the OneConnect UCNA. Also, the use of the vmxnet NIC emulator can provide a significant performance boost. These features are not enabled by default in ESX Server. To enable these features:

1. Log into the console operating system.
2. For each guest operating system, there is a .vmx file in the path:
`/vmfs/volumes/*/ <VM-NAME> / <VM-NAME> .vmx`
 where <VM-NAME> is the name of the VM.
3. For each VM, edit this file and add the following line for the OneConnect driver interface:
`ethernet0.features="15."`
4. To enable vmxnet emulation, add the following line for the OneConnect driver interface:
`ethernet0.virtualDev="vmxnet"`
5. Restart the VMs.

Steps 1 through 5 assume that eth0 is the interface added to the VM from the OneConnect Network.

Note: The use of vmx NIC emulation requires VMware Tools to be installed in the guest operating systems. For information on installing VMware Tools in a Linux or Windows guest operating system, refer to the VMware ESX Server 4.1 documentation.

Configuring a Virtual Switch to Use Jumbo Frames

To use jumbo frames, you must increase the MTU (Maximum Transmission Unit) size in the vSwitch and also in the guest operating system. For the best combination of performance and resource usage, set the MTU to the maximum MTU supported by the OneConnect driver, which is 8179 bytes. This requires the MTU to be changed in the virtual switch as well as the guest operating systems.

Setting the MTU Size in the vSwitch

To change the MTU to 8179 in the console operating system, run the following command for each switch in the console operating system:

```
esxcfg-vswitch vSwitch<N> -m 8179
```

where <N> is the number of the switch.

Setting the MTU Size for a Linux Guest Operating System

To set the MTU of the OneConnect driver interface in each Linux Guest operating system to 8179, run the following command:

```
ifconfig eth<N> mtu 8179
```

where <N> is the number of the Ethernet interface on which you are working.

Setting the MTU Size for a Windows Guest Operating System

To set the MTU in each Windows guest operating system:

1. Go to the **Start** menu and select **Control Panel > System**.
2. Select the **Hardware** tab and open **Device Manager**.
3. Expand the **Network Adapters** heading.
4. Right click on the **NIC**, and select **Properties**.
5. Select the **Advanced** tab and set the MTU value.

Pinning VMs and Interrupts to CPUs

The OneConnect driver supports MSI-X interrupts. The driver requests separate MSI-X interrupt request (IRQ) vectors for each of the interfaces. Pinning VMs and the IRQ vector to a CPU core helps provide the best performance from the OneConnect UCNA. With a multi-core CPU, pinning a VM (and the MSI-X vector of the OneConnect driver interface configured in that VM) to two cores sharing an L2 cache provides the best performance. For example, in a quad core Xeon, CPU0 and CPU1 share a 4MB L2 cache. If you have configured vmnic16 in VM1, for the best performance pin VM1 to CPU0 and the IRQ corresponding to vmnic16 to CPU1.

To pin a VM to a CPU in the VI Client:

1. Power off the VM.
2. Click **Edit Settings** in the **Resources** tab for that VM.
3. Select **Advanced CPU**.
4. In the **Scheduling Affinity** frame, select the CPU to pin it to.

5. Power on the VM.

To pin an IRQ vector to a CPU, run the following command in the console operating system:

```
echo "move <IRQ-NO> <CPU-ID>" > /proc/vmware/intr-tracker
```

You can find the IRQ-NO corresponding to a vmnic by running:

```
cat /proc/vmware/interrupts
```

To see all IRQ Vectors and the CPU to which they are pinned, run:

```
cat /proc/vmware/intr-tracker
```

iSCSI Error Handling

The goal of iSCSI error handling is to be tolerant of link-level and/or target-level failures up to configured timeout values so that I/O errors are not seen by the application or operating system. The error handling is triggered under the following conditions:

- Loss of immediate link to the initiator (for example, cable disconnect/port failure)

The UCNA firmware detects and notifies the driver of a loss of the link. When this happens, the driver will queue I/O requests internally up to a configured timeout period so that the operating system does not see I/O errors. This timeout is known as Link Down Timeout (LDTO)

- Loss of connection to the target due to target and /or network disconnection at the target.

If the driver has I/O requests pending with the target and the target becomes unavailable (due to target going-down/failing-over or network issues at the target), the driver queues up the I/O request internally up to a configured timeout period. This timeout is known as Extended Timeout (ETO).

When the configured threshold for LDTO and ETO is reached and the initiator is still unable to connect to the target, the driver fails all I/O requests. At this point, I/O errors will be seen by the application and operating system.

Configuring LDTO and ETO

The following table lists the default values of LDTO and ETO on ESX 4.1 and the limits within which they can be configured:

Table 2: Configuring LDTO and ETO

Value	Default	Min	Max
LDTO	20 secs	0 secs	30 secs
ETO	30 secs	20 secs ^a	30 secs

a. the value of 0 secs is allowed but will internally translate to 20 secs.

The ETO value can be configured on a per-target basis using the *OneCommand Manager CLI User's Manual*. See the *OneCommand Manager CLI User's Manual* for details on configuring ETO. ETO settings configured using the OneCommand Manager CLI are persistent across reboots, driver upgrades and operating system upgrades. If the ETO is set for a target using the OneCommand Manager CLI, it must be modified or removed from within the OneCommand Manager CLI.

The following command line shows how to configure the driver with LDTO value as 25 secs.

```
# vmkload_mod be2iscsi ldto=25
```

To configure ESX Server to load the iSCSI driver with this value after each reboot, run the following commands and reboot the system:

```
# esxcfg-module -s "ldto=25" be2iscsi
# /usr/sbin/esxcfg-boot -r
# reboot
```

Error Handling Under MultiPath (MPIO) and Cluster Configurations

In an MPIO or cluster configuration, fault tolerant software is present on the system that makes the iSCSI driver error handling redundant. These configurations also require that I/O errors be reported as soon as they are detected so the software can failover to an alternate path or an alternative node as quickly as possible.

When the be2iscsi driver is run under these configurations, the error handling implemented in the be2iscsi driver needs to be turned off by setting the default values of LDTO and ETO to 0. The changes will take effect during the next driver load.

Also, if ETO values have been modified using the OneCommand Manager CLI then the utility must be used to explicitly set the ETO value to 0. Again, the ETO modifications done using the utility is immediate and will persist for the target across reboots/upgrades and will override any value for ETO that you provide during driver load.

Troubleshooting

Introduction

There are several circumstances in which your system may operate in an unexpected manner. The Troubleshooting section explains many of these circumstances and offers one or more workarounds for each situation.

FC/FCoE Troubleshooting

General Situations

Table 3. General Driver Situations, FC and FCoE

Situation	Resolution
Port link fails to come up.	<p>If an FC link fails to come up, verify that an 8 Gb/s adapter is not attempting to connect to a 1 Gb/s device. Only 2, 4 and 8 Gb/s devices are supported on 8 Gb/s adapters.</p> <p>For LP21000 adapters, ensure the adapter is not in maintenance mode and that it is not running the manufacturing firmware.</p> <p>For the OCe10100 family of adapters, ensure that the fabric port is enabled.</p>
The Emulex driver is not loaded and all paths are down.	<p>Use lspci to determine if the Emulex ports are being properly identified. If not, find out if the driver iso was correctly installed. You must have the correct driver for the installed adapter because the device PCI IDs are installed with the driver package.</p> <p>Examine the /var/log/vmkernel file for lpfc820 log messages indicating an error. In this case contact Emulex support.</p>
lpfc driver fails to recognize an adapter and logs "unknown IOCB" messages in the system log during driver load. The adapter is running outdated firmware.	Upgrade the adapter firmware to the minimum supported revision (or newer) listed in the installation guide.
System panics when booted with a failed adapter installed.	Remove the failed adapter and reboot.

Ipfc Log Messages

Introduction

Log messages have traditionally been organized into logical groups based on code functionality in the FC driver. With the introduction of OneConnect UCNAs by Emulex, that grouping is modified to account for new behaviors. The traditional grouping is maintained, but new messages no longer group together nicely.

The messages provided in this section are unmaskable error conditions. They are automatically added to the system console log.

You can examine the `/var/log/vmkernel` file to see any of these messages. If you have concerns, the best policy is to execute a vm-support dump and push it to the VMware/Emulex support staff.

Log messages are organized into logical groups based on code functionality within the Fibre Channel driver. Each group consists of a block of 100 log message numbers. Most groups require a single block of 100 message numbers, however some groups (INIT, FCP) require two blocks.

Table 4, the Message Log table, shows the groups and defines the associated number ranges.

Table 4: Message Log Table

LOG Message Verbose Mask Definition	From	To	Verbose Bit	Verbose Description
LOG_ELS	0100	0199	0x1	ELS events
LOG_DISCOVERY	0200	0299	0x2	Link discovery events
LOG_SLI	0300	0399	0x800	SLI events
LOG_MBOX	0300	0339	0x4	Mailbox events
LOG_TEMP	0340	0347	0x100	Temperature sensor events
LOG_INIT	0400	0599	0x8	Initialization events
LOG_FCP	0700	0799	0x40	FCP traffic history
Reserved	0800	0899		
LOG_NODE	0900	0999	0x80	Node table events
Reserved	1000	1099		
Reserved	1100	1199		
LOG_MISC LOG_FCoE	1200	1299	0x400	Miscellaneous and FCoE events
LOG_LINK_EVENT	1300	1399	0x10	Link events
Reserved	1400	1499		
Reserved	1500	1599		
LOG_LIBDFC	1600	1699	0x2000	IOCTL events
LOG_VPORT	1800	1832	0x4000	NPIV events

Table 4: Message Log Table (Continued)

LOG Message Verbose Mask Definition	From	To	Verbose Bit	Verbose Description
FCoE EVENTS	1833	2800		The verbose bit remains with the previous rows.
LOG_ALL_MSG	0100	2600	0xffffffff	Log all messages

Message Log Example

The following is an example of a LOG message:

```
Jul  9 09:38:02 raman vmkernel: 0:00:01:42.995
cpu0:4225)<3>lpfc820 0000:0a:00.2: 0:1303 Link Up Event x1
received Data: x1 x0 x40 x0 x0 x0 0
```

In the above LOG message:

- pfc820 0000:0a:00.2: identifies the identifies the PCI location of the particular lpfc hw port.
- 0: identifies Emulex HBA 0.
- 1303 identifies the LOG message number.

Note: If the word 'Data:' is present in a LOG message, any information to the right of 'Data:' is intended for Emulex technical support/engineering use only.

Note: Unless otherwise noted in the ACTION: attribute, report these errors to Technical Support. Emulex requests that when reporting occurrences of these error messages, you provide a tarball of all vmkernel files in /var/log.

ELS Events (0100 - 0199)

elx_mes0100: FLOGI failure Status:<status>/<extended_status> TMO:<timeout>

DESCRIPTION: An ELS FLOGI command that was sent to the fabric failed.

DATA: (1) ulpStatus, (2) ulpWord[4], (3) ulpTimeout

ACTION: This error could indicate a fabric configuration error or internal driver issue. If problems persist report these errors to Technical Support.

elx_mes0111: Dropping received ELS cmd

DESCRIPTION: The driver decided to drop an ELS Response ring entry.

DATA: (1) ulpStatus, (2) ulpWord[4], (3) ulpTimeout

ACTION: This error could indicate a software driver or firmware problem. If problems persist report these errors to Technical Support.

elx_mes0113: An FLOGI ELS command <elsCmd> was received from DID <did> in Loop Mode

DESCRIPTION: While in Loop Mode an unknown or unsupported ELS command was received.

DATA: None

ACTION: Check device DID.

elx_mes0115: Unknown ELS command <elsCmd> received from N_Port <did>

DESCRIPTION: Received an unsupported ELS command from a remote N_Port.

DATA: None

ACTION: Check remote N_Port for potential problem.

elx_mes0125: FDISC Failed (x%x). Fabric out of resources

DESCRIPTION: The fabric rejected an FDISC because the switch can not support any more VPorts.

DATA: None

ACTION: Reconfigure the switch to support more NPIV logins. If problem persists, contact Technical Support.

elx_mes0126: FDISC failed (ulpStatus/ulpWord[4])\n

DESCRIPTION: The ELS FDISC command has failed.

DATA: None

ACTION: Check the port and switch configuration.

elx_mes0127: ELS timeout

DESCRIPTION: An ELS IOCB command was posted to a ring and did not complete within ULP timeout seconds.

DATA: (1) elscmd, (2) remote_id, (3) ulpcommand, (4) ulploTag

ACTION: If no ELS command is going through the adapter, reboot the system; If problem persists, contact Technical Support.

elx_mes0133: PLOGI: no memory for reg_login

DESCRIPTION: Memory allocation error.

DATA: (1) nlp_DID, (2) nlp_state, (3) nlp_flag, (4) nlp_rpi

ACTION: Memory allocation error. Check system resources. Unload unused modules.

elx_mes0134: PLOGI: cannot issue reg_login

DESCRIPTION: The ELS PLOGI mailbox command has failed.

DATA: (1) nlp_DID, (2) nlp_state, (3) nlp_flag, (4) nlp_rpi

ACTION: Check the port and switch configuration.

elx_mes0135: cannot format reg_login

DESCRIPTION: Could not allocate an RPI or DMA buffer for the mailbox command.

DATA: (1) nlp_DID, (2) nlp_state, (3) nlp_flag, (4) nlp_rpi

ACTION: None required.

elx_mes0136: PLOGI completes to N_Port <DID> completion

DESCRIPTION: A PLOGI has completed for which there is no NDLP.

DATA: (1) ulpStatus, (2) ulpWord[4]

ACTION: None required.

elx_mes0137: No retry ELS command <ELS_CMD> to remote

DESCRIPTION:

DATA: (1) ulpStatus, (2) ulpWord[4]

ACTION: None required.

elx_mes0138: ELS rsp: Cannot issue reg_login for <DID>

DESCRIPTION: REG_LOGIN mailbox command failed.
DATA: (1) nlp_DID, (2) nlp_state, (3) nlp_flag, (4) nlp_rpi
ACTION: None required.

elx_mes0139: Ignoring ELS cmd tag <ioTag> completion Data

DESCRIPTION: This ELS command was aborted.
DATA: (1) ulpStatus, (2) ulpWord[4], (3) ulpTimeout
ACTION: None required.

elx_mes0140: PLOGI Reject: invalid nname

DESCRIPTION: Invalid node WWN provided.
DATA: None
ACTION: None required.

elx_mes0141: PLOGI Reject: invalid pname

DESCRIPTION: Invalid port WWN provided.
DATA: None
ACTION: None required.

elx_mes0142: PLOGI RSP: Invalid WWN

DESCRIPTION: The PLOGI sent to the port by a remote port had an invalid WWN.
DATA: None
ACTION: None required.

elx_mes0144: Not a valid WCQE code: <Completion Code>

DESCRIPTION: The completion queue handler detected an invalid type.
DATA: None
ACTION: None required.

elx_mes0147: Failed to allocate memory for RSCN event

DESCRIPTION: Memory could not be allocated to send the RSCN event to the management application.
DATA: None
ACTION: None required.

elx_mes0148: Failed to allocate memory for LOGO event

DESCRIPTION: Memory could not be allocated to send the LOGO event to the FC transport.
DATA: None
ACTION: None required.

elx_mes0154: Authentication not complete

DESCRIPTION: Authentication was restarted because the previous authentication did not complete.
DATA: None
ACTION: Check the switch configuration.

Link Discovery Events (0200 - 0299)

elx_mes0200: CONFIG_LINK bad hba state <hba_state>

DESCRIPTION: A CONFIG_LINK mbox command completed and the driver was not in the right state.

DATA: None

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes0203: Devloss timeout on WWPN <address> N_Port <nlp_DID>

DESCRIPTION: A remote N_Port that was discovered by the driver disappeared for more than lpfc_devloss_tmo seconds.

DATA: (1) nlp_flag, (2) nlp_state, (3) nlp_rpi

ACTION: If the device generating this message is not a target of the adapter to which it is connected, this error does not affect the data integrity of the I/O between the adapter and the attached storage and can be ignored.

elx_mes0206: Device discovery completion error

DESCRIPTION: This indicates that an uncorrectable error was encountered during device (re)discovery after a link up. Fibre Channel devices are not accessible if this message is displayed.

DATA: None

ACTION: Reboot the system. If the problem persists, report the error to Technical Support. Run with verbose mode on for more details.

elx_mes0207: Device <DID> (<WWN>) sent invalid service parameters. Ignoring device.

DESCRIPTION: Invalid service parameters were received from DID. Ignoring this remote port.

DATA: DID, WWN

ACTION: Verify the remote port's configuration. If the problem persists, report the error to Technical Support. Run with verbose mode on for more details.

elx_mes0222: Initial FLOG/FDISK timeout

DESCRIPTION: The driver sent the initial FLOGI or FDISK to the fabric and did not get a response.

DATA: None

ACTION: Check fabric configuration. The driver recovers from this and continues with device discovery.

elx_mes0223: Timeout while waiting for NameServer login

DESCRIPTION: Our login request to the NameServer was not acknowledged within RATO_V.

DATA: None

ACTION: Check the fabric configuration. The driver recovers from this and continues with device discovery.

elx_mes0224: NameServer Query timeout

DESCRIPTION: Node authentication timeout, node discovery timeout. A NameServer query to the fabric or discovery of reported remote N_Ports is not acknowledged within R_A_TOV.

DATA: (1) fc_ns_retry, (2) fc_max_ns_retry

ACTION: Check fabric configuration. The driver recovers from this and continues with device discovery.

elx_mes0226: Device discovery completion error

DESCRIPTION: This indicates that an uncorrectable error was encountered during device (re)discovery after a link up. Fibre Channel devices are not accessible if this message is displayed.

DATA: None

ACTION: Reboot the system. If the problem persists, report the error to Technical Support. Run with verbose mode on for more details.

elx_mes0227: Node Authentication timeout

DESCRIPTION: The driver has lost track of what N_Ports are being authenticated.

DATA: None

ACTION: None required. The driver should recover from this event.

elx_mes0228: CLEAR LA timeout

DESCRIPTION: The driver issued a CLEAR_LA that never completed.

DATA: None

ACTION: None required. The driver should recover from this event.

elx_mes0230: Unexpected timeout, hba linkstate <link_state>

DESCRIPTION: Discovery has timed out and the adapter state is not ready.

DATA: None

ACTION: None required.

elx_mes0231: RSCN timeout

DESCRIPTION: The driver has lost track of which N_Ports have RSCNs pending.

DATA: (1) fc_ns_retry, (2) lpfc_max_ns_retry

ACTION: None required. The driver should recover from this event.

elx_mes0233: Nodelist not empty

DESCRIPTION: Driver unload or hotplug detected a node still in use.

DATA: None

ACTION: None required.

elx_mes0246: RegLogin failed

DESCRIPTION: The firmware returned a failure for the specified RegLogin.

DATA: (1) Did, (2) mbxStatus, (3) hbaState

ACTION: This message indicates that the firmware could not do RegLogin for the specified DID. There may be a limitation on how many nodes an adapter can see.

elx_mes0249: Cannot issue Register Fabric login: Err <err>

DESCRIPTION: Could not issue the fabric reg login; the err value is unique for each possible failure.

DATA: None

ACTION: None required.

elx_mes0251: NameServer login: no memory

DESCRIPTION: Could not allocate memory for the NDLP structure.

DATA: None

ACTION: None required.

elx_mes0252: Cannot issue NameServer login

DESCRIPTION: Could not issue an ELS PLOGI to the nameserver DID.

DATA: None

ACTION: Check the port connection and switch configuration.

elx_mes0253: Register VPI: Can't send mbox

DESCRIPTION: Could not issue the REG_LOGIN command for this VPort.

DATA: None

ACTION: None required.

elx_mes0254: Register VPI: no memory" goto mbox_err_exit

DESCRIPTION: Could not allocate memory for the REG_LOGIN mailbox command.

DATA: None

ACTION: None required.

elx_mes0255: Issue FDISC: no IOCB

DESCRIPTION: All of the pre-allocated IOCBs are in use.

DATA: None

ACTION: None required.

elx_mes0256: Issue FDISC: Cannot send IOCB

DESCRIPTION: Unable to send the fabric IOCB.

DATA: None

ACTION: Check the switch configuration.

elx_mes0257: GID_FT Query error: <ulpStatus> <fc_ns_retry>

DESCRIPTION: The GID_FT CT request for the nameserver has failed.

DATA: None

ACTION: Check the switch configuration.

elx_mes0258: Register Fabric login error: <mbxStatus>

DESCRIPTION: The REG_LOGIN for the fabric has failed.

DATA: None

ACTION: Check the port and switch configuration.

elx_mes0259: No NPIVFabric support

DESCRIPTION: The switch to which the port is connected does not support NPIV.

DATA: None

ACTION: Check the switch configuration.

elx_mes0260: Register NameServer error: <mbxStatus>

DESCRIPTION: The REG_LOGIN mailbox command has failed for the nameserver.

DATA: None

ACTION: Check the switch configuration.

elx_mes0261: Cannot Register NameServer login

DESCRIPTION: Either a memory allocation issue or an invalid parameter was sent to the REG_LOGIN.

DATA: None

ACTION: At least one message (0142 0121 0133 0134 0135) should precede this message.

elx_mes0262: No NPIV Fabric support

DESCRIPTION: The switch to which the port is connected does not support NPIV.

DATA: None

ACTION: Check the switch configuration.

**elx_mes0263: Discovery Mailbox error: state: <port_state> : <sparam_mbox>
<cfglink_mbox>**

DESCRIPTION: Either the driver could not allocate resources or it could not send sparam_mbox or cfglink_mbox.

DATA: (1) address of sparam_mbox command, (2) address of cfglink_mbox command.

ACTION: Attempt to unload and reload the driver when it is convenient.

elx_mes0264: No NPIV Fabric support

DESCRIPTION: The switch to which the port is connected does not support NPIV.

DATA: None

ACTION: Check the switch configuration.

**elx_mes0266: Issue NameServer Req <cmdcode> err <rc> Data: <fc_flag>
<fc_rscn_id_cnt>**

DESCRIPTION: The driver was not able to send the nameserver CT command.

DATA: (1) VPorts fc_flag, (2) VPorts fc_rscn_id_cnt

ACTION: Check the switch and port configurations.

**elx_mes0267: NameServer GFF Rsp "<did> Error (<ulpStatus> <un.ulpWord[4]>) Data:
<fc_flag> <fc_rscn_id_cnt>**

DESCRIPTION: The nameServer GFF CT request failed.

DATA: (1) VPorts fc_flag, (2) VPorts fc_rscn_id_cnt

ACTION: Check the switch and port configurations.

elx_mes0268: NS cmd <cmdcode> Error (<ulpStatus> <un.ulpWord[4]>)

DESCRIPTION: The nameServer CT request failed.

DATA: None.

ACTION: Check the switch and port configurations.

**elx_mes0271: Illegal State Transition: node <nlp_DID> event <evt>, state <nlp_state>
Data:<nlp_rpi> <nlp_flag>**

DESCRIPTION: The current node state does not have a handler for this event.

DATA: (1) nlp_rpi, (2) nlp_flag

ACTION: Verify that all targets are still visible to the SCSI mid-layer.

**elx_mes0272: Illegal State Transition: node <nlp_DID> event <evt>, state <nlp_state>
Data: <nlp_rpi> <nlp_flag>**

DESCRIPTION: The driver is completing a PLOGI but do not have the rcv_plogi flag set.

DATA: (1) nlp_rpi, (2) nlp_flag

ACTION: Verify that all targets are still visible to the SCSI mid-layer.

elx_mes0273: Unexpected discovery timeout,vport State <port_state>

DESCRIPTION: The discovery process has timed out.

DATA: None

ACTION: Ensure all targets are visible.

**elx_mes0282: did:x%x ndlp:x%pugmap:x%x refcnt:%d, ndlp->nlp_DID, (void *)ndlp,
lpfc_init.c-ndlp->nlp_usg_map,**

DESCRIPTION: Driver clean-up has found a node that is still on the node list during driver unload or PCI hotplug removal.

DATA: None.

ACTION: None required.

elx_mes0283: Failed to allocate mbox cmd memory

DESCRIPTION: Mailbox allocation error.

DATA: None

ACTION: None required.

**elx_mes0285: Allocated DMA memory size <alloclen> is less than the requested DMA
memorysize <reqlen>**

DESCRIPTION: Memory allocation was truncated.

DATA: None

ACTION: None required.

elx_mes0286: lpfc_nlp_state_cleanup failed toallocate statistical data buffer <nlp_DID>

DESCRIPTION: Memory allocation failed for node's statistical data.

DATA: None

ACTION: None required.

elx_mes0287: lpfc_alloc_bucket failed to allocate statistical data buffer <nlp_DID>

DESCRIPTION: Memory allocation failed for node's statistical data.

DATA: None

ACTION: None required.

elx_mes0288: Unknown FCoE event type <event_type> event tag <event_tag>

DESCRIPTION: The firmware has detected an unknown FCoE event.

DATA: None

ACTION: Check the FCoE switch configuration and the adapter DCBX mode.

elx_mes0289: Issue Register VFI failed: Err <rc>

DESCRIPTION: The driver could not register the virtual fabric Index for the FCFI.

DATA: None

ACTION: Check the switch and port configurations.

elx_mes0290: The SLI4 DCBX asynchronous event is not handled yet

DESCRIPTION: The SLI-4 DCBX asynchronous event is not handled yet.

DATA: None

ACTION: None required.

elx_mes0291: Allocated DMA memory size <alloc_len> is less than the requested DMA memsize <req_len>

DESCRIPTION: The asynchronous DCBX events are not handled in the driver.

DATA: None

ACTION: Check the switch configuration.

elx_mes0293: PM resume failed to start workerthread: error=<error>

DESCRIPTION: The PCI resume (hotplug) could not start the worker thread for the driver.

DATA: None

ACTION: Unload and reload the driver.

elx_mes0294: PM resume Failed to enable interrupt

DESCRIPTION: The PCI resume (hotplug) could not get an interrupt vector.

DATA: None

ACTION: Unload and reload the driver.

envalid device group <pci_dev_grp>

DESCRIPTION: While unloading the driver, the driver detect a PCI device that it should not have claimed.

DATA: None

ACTION: None required.

elx_mes0299: Invalid SLI revision <sli_rev>

DESCRIPTION: While processing a host attention or unrecoverable error, the driver detected an invalid SLI revision.

DATA: None

ACTION: None required.

Mailbox Events (0300 - 0339)

elx_mes0300: LATT: Cannot issue READ_LA: Data: <rc>

DESCRIPTION: The link attention handler could not issue a READ_LA mailbox command.

DATA: None

ACTION: None required.

elx_mes0303: Ring <ringno> handler: portRspPut <portRspPut> is bigger then rsp ring <portRspMax>

DESCRIPTION: The port rsp ring put index is larger than the size of the rsp ring.

DATA: None

ACTION: This error could indicate a software driver, firmware or hardware problem. Report these errors to Technical Support.

elx_mes0304: Stray mailbox interrupt, mbxCommand <mbxcommand> mbxStatus <mbxstatus>

DESCRIPTION: Received a mailbox completion interrupt and there are no outstanding mailbox commands.

DATA: None

ACTION: This error could indicate a hardware or firmware problem. If the problem persists, report the error to Technical Support.

elx_mes0306: CONFIG_LINK mbxStatus error <mbxStatus> HBA state <hba_state>

DESCRIPTION: The driver issued a CONFIG_LINK mbox command to the adapter that failed.

DATA: None

ACTION: This error could indicate a firmware or hardware problem. Report these errors to Technical Support.

elx_mes0310: Mailbox command <mbxcommand> timeout

DESCRIPTION: A mailbox command was posted to the adapter and did not complete within 30 seconds.

DATA: (1) hba_state, (2) sli_flag, (3) mbox_active

ACTION: This error could indicate a software driver or firmware problem. If no I/O is going through the adapter, reboot the system. If the problem persists, report the error to Technical Support.

elx_mes0312: Ring <ringno> handler: portRspPut <rspPutInx> is bigger then rsp ring <numRiocb>

DESCRIPTION: The IOCB command rings put pointer is ahead of the get pointer.

DATA: None

ACTION: None required.

elx_mes0315: Ring <ringno> issue: portCmdGet <local_getidx> is bigger then cmd ring <max_cmd_idx>

DESCRIPTION: The port cmd ring get index is greater than the size of cmd ring.

DATA: None

ACTION: This error could indicate a software driver, firmware or hardware problem. Report these errors to Technical Support.

elx_mes0317: iotag <ulp_ioTag> is out of range: max iotag <max_iotag> wd0 <wd0>

DESCRIPTION: The IoTag in the completed IOCB is out of range.

DATA: None

ACTION: This error could indicate a software driver, firmware or hardware problem. Report these errors to Technical Support.

elx_mes0318: Failed to allocate IOTAG. last IOTAG is <last_allocated_iotag>

DESCRIPTION: The driver cannot allocate an IoTag. Display the last value used.

DATA: None

ACTION: This message indicates the adapter I/O queue is full. Typically this happens when heavy I/O is running on a low-end (3 digit) adapter. We suggest you upgrade to a higher-end adapter.

elx_mes0319: READ_SPARAM mbxStatus error <mbxStatus> hba state <hba_state>

DESCRIPTION: The driver issued a READ_SPARAM mbox command to the adapter that failed.

DATA: None

ACTION: This error could indicate a firmware or hardware problem. Report these errors to Technical Support.

elx_mes0320: CLEAR_LA mbxStatus error <mbxStatus> hba state <hba_state>

DESCRIPTION: The driver issued a CLEAR_LA mbox command to the adapter that failed.

DATA: None

ACTION: This error could indicate a firmware or hardware problem. Report these errors to Technical Support.

elx_mes0323: Unknown Mailbox command <mbxCommand> Cmpl

DESCRIPTION: A unknown mailbox command completed.

DATA: None

ACTION: This error could indicate a software driver, firmware or hardware problem. Report these errors to Technical Support.

**elx_mes0324: Config port initialization error, mbxCmd <mbxCommand>
READ_NVPARM, mbxStatus <mbxStatus>**

DESCRIPTION: A read nvparams mailbox command failed during port configuration.

DATA: None

ACTION: This error could indicate a software driver, firmware or hardware problem. Report these errors to Technical Support.

elx_mes0330: IOCB wake NOT set

DESCRIPTION: The completion handler associated with the IOCB was never called.

DATA: (1) timeout, (2) timeleft/jiffies

ACTION: This error could indicate a software driver, firmware or hardware problem. If the problem persists, report the error to Technical Support.

elx_mes0334: Unknown IOCB command

DESCRIPTION: Received an unknown IOCB command completion.

DATA: (1) type, (2) ulpCommand, (3) ulpStatus, (4) ulploTag, (5) ulpContext)

ACTION: This error could indicate a software driver or firmware problem. If these problems persist, report these errors to Technical Support.

elx_mes0335: Unknown IOCB command

DESCRIPTION: Received an unknown IOCB command completion.

DATA: (1) ulpCommand, (2) ulpStatus, (3) ulploTag, (4) ulpContext)

ACTION: This error could indicate a software driver or firmware problem. If these problems persist, report these errors to Technical Support

elx_mes0340: Adapter temperature is OK now

DESCRIPTION: Adapter temperature has reverted to normal range.

DATA: Temperature in Celsius

ACTION: No action needed, informational.

**elx_mes0341: Ring <ringno> Cannot find buffer for an unsolicited iocb tag
<un.ulpWord[3]>**

DESCRIPTION: There are no more pre-allocated buffers available to handle unsolicited buffers.

DATA: None

ACTION: Ensure this port is not being managed by multiple ports.

**elx_mes0342: Ring <ringno> Cannot find buffer for an unsolicited iocb tag
<unsl3.sli3Words>**

DESCRIPTION: This is a multiple IOCB unsolicited command and sufficient buffer space cannot be allocated for it.

DATA: None

ACTION: None required.

**elx_mes0343: Ring <ringno> Cannot find buffer for an unsolicited iocb tag
<un.ulpWord[3]>**

DESCRIPTION: There are no more pre-allocated buffers available to handle unsolicited buffers.

DATA: None

ACTION: None required.

**elx_mes0344: Ring <ringno> Cannot find buffer for an unsolicited iocb tag
<unsl3.sli3Words[7]>**

DESCRIPTION: There are no more pre-allocated buffers available to handle unsolicited buffers.

DATA: None

ACTION: None required.

elx_mes0345: Resetting board due to mailbox timeout

DESCRIPTION: A mailbox command failed to complete. The driver is resetting the port.

DATA: None

ACTION: If the mailbox command fails again, set the lpfc_log_verbose to LOG_MBOX and retry.

**elx_mes0346: Ring <ring number> handler: unexpected ASYNC_STATUS evt_code
<evtcode> W0 <hex w0> W1 <hex w1> W2 <hex W2> W3 <hex W3> W4 <hex W4> W5
<hex Z5> W6 <hex W6> W7 <hex W7> W8 <hex W8> W9 <hex W9> W10 <hex W10>
W11<hex W11>**

DESCRIPTION: The adapter received an asynchronous event that was not a temperature event.

DATA: None

ACTION: None required.

elx_mes0347: Adapter is very hot, please take corrective action

DESCRIPTION: Adapter temperature is above normal range

DATA: Temperature in Celsius

ACTION: Shutdown and remove the adapter. Contact customer support.

elx_mes0348: NameServer login: node freed

DESCRIPTION: The enable mode failed to free up the nameserver login.

DATA: None

ACTION: None required.

elx_mes0349: rc should be MBX_SUCCESS

DESCRIPTION: The next mailbox command on the mailbox queue has failed.

DATA: None

ACTION: None required.

elx_mes0350: rc should have been MBX_BUSY

DESCRIPTION: Attempting to unregister a default RPI from an interrupt context and the mailbox state is not busy.

DATA: None

ACTION: None required.

elx_mes0352: Config MSI mailbox command failed, mbxCmd <u.mb.mbxCommand>, mbxStatus <u.mb.mbxStatus>

DESCRIPTION: The mailbox command sent to the firmware to configure the adapter to use MSI-X has failed.

DATA: None

ACTION: Ensure the hardware platform supports MSI-X.

elx_mes0353: Active Mailbox cleared - mailbox timeout exiting

DESCRIPTION: The mailbox timeout handler has determined that the driver is in the process of completing this mailbox command.

DATA: None

ACTION: None required.

elx_mes0359: Not a valid slow-path completion " event: majorcode=x%x, minor-code=x%x\n", bf_get(lpfc_eqe_major_code, eqe), bf_get(lpfc_eqe_minor_code, eqe));

DESCRIPTION: SLI-4: The EQE is not valid.

DATA: None

ACTION: None required.

elx_mes0360: Unsupported EQ count. <entry_count>

DESCRIPTION: Cannot create an event queue of this size.

DATA: None

ACTION: None required.

elx_mes0361: Unsupported CQ count. <entry_count>

DESCRIPTION: Cannot create a completion queue of this size.

DATA: None

ACTION: None required.

elx_mes0362: Unsupported MQ count. <entry_count>

DESCRIPTION: Cannot create MQ count of this size.

DATA: None

ACTION: None required.

elx_mes0364: Invalid param:

DESCRIPTION: SLI-4: The post SGL function was passed an invalid XRI.

DATA: None

ACTION: None required.

elx_mes0365: Slow-path CQ identifier <cqid> does not exist

DESCRIPTION: The Completion Queue ID passed in the Event Queue entry does not reference a valid completion queue.

DATA: None

ACTION: None required.

elx_mes0366: Not a valid fast-path completion event: majorcode=<major code hex>, minorcode=<minor code hex>

DESCRIPTION: The major or minor code in the Event Queue field is not valid.

DATA: None

ACTION: None required.

elx_mes0367: Fast-path completion queue does not exist

DESCRIPTION: The fast path completion queue referenced by the CQID does not exist.

DATA: None

ACTION: None required.

elx_mes0368: Miss-matched fast-path completion queue identifier: eqcqid=<cqid>, fcpcqid=<queue_id>

DESCRIPTION: The CQID in the event queue entry does not match the fcp_cqid that was passed into the routine.

DATA: None

ACTION: None required.

elx_mes0369: No entry from fast-path completion queue fcpcqid=<queue_id>

DESCRIPTION: There were no completions in the completion queue referenced by fcpcqid.

DATA: None

ACTION: None required.

elx_mes0370: Invalid completion queue type <type>

DESCRIPTION: The event queue entry is not for a mailbox or a work queue entry.

DATA: None

ACTION: None required.

elx_mes0371: No entry from the CQ: identifier <queue_id>, type <type>

DESCRIPTION: There was no completion queue event for this event queue entry.

DATA: None

ACTION: None required.

elx_mes0372: iotag <iotag> is out of range: max iotag (<slr.last_iotag>)

DESCRIPTION: The IOCB lookup cannot be performed because the iocb_tag is out of range.

DATA: None

ACTION: None required.

elx_mes0376: READ_REV Error. SLI Level <sl_rev> FCoE enabled <hba_flag & HBA_FCOE_SUPPORT>

DESCRIPTION: This SLI-4 only adapter setup function was called for a non-SLI-4 device.

DATA: None

ACTION: None required.

elx_mes0377: Error <rc> parsing vpd. Using defaults.

DESCRIPTION: Could not parse the VPD data, so the driver is using the default values.

DATA: None

ACTION: None required.

elx_mes0381: Error <rc> during queue setup.

DESCRIPTION: Could not set up all the queues that driver requires to exchange IOs with the adapter.

DATA: None

ACTION: Reload the driver.

elx_mes0382: READ_SPARAM command failed status <issue status>, mbxStatus <mailbox status>

DESCRIPTION: The READ_SPARAM mailbox command has failed during initialization. The adapter has been set to error state.

DATA: None

ACTION: Take a dump with hbacmd and then try reloading the driver.

elx_mes0384: There is pending active mailbox cmd

DESCRIPTION: The mailbox commands have overlapped. This command should have been added to the mailbox queue.

DATA: None

ACTION: None required.

elx_mes0385: rc should have been MBX_BUSY

DESCRIPTION: The completion handler for REG_LOGIN detected the IMMED_UNREG flag and tried to issue the unreg_login command from an interrupt level. The mailbox status should still be busy.

DATA: None

ACTION: None required.

elx_mes0387: Failed to allocate an iocbq

DESCRIPTION: Failed to get an IOCBQ from the list of available IOCBQs.

DATA: None

ACTION: None required.

elx_mes0388: Not a valid WCQE code: <hex cq_code>

DESCRIPTION: The event code is invalid. This event is dropped.

DATA: None

ACTION: Ensure the adapter's firmware is current.

elx_mes0391: Error during rpi post operation

DESCRIPTION: The driver was trying to post pages to the firmware to be used to keep target login information and encountered a failure.

DATA: None

ACTION: Unload and reload the driver.

elx_mes0393: Error <rc> during rpi post operation

DESCRIPTION: The driver was trying to post pages to the firmware to keep target login information and encountered a failure.

DATA: None

ACTION: Unload and reload the driver.

elx_mes0394: Failed to allocate CQ_EVENT entry

DESCRIPTION: The asynchronous event handler was not able to allocate an event queue entry to which to transfer the asynchronous event.

DATA: None

ACTION: This could be a V-LINK clear from the switch or a fatal error from the firmware. Perform a dump from the OneCommand Manager application.

elx_mes0395: The mboxq allocation failed

DESCRIPTION: The asynchronous link event handler could not allocate a mailbox command to issue the READ_LA (read link attention) mailbox command.

DATA: None

ACTION: None required.

elx_mes0396: The lpfc_dmabuf allocation failed

DESCRIPTION: The asynchronous link event handler could not allocate a DMA buffer for the mailbox command to issue the READ_LA (read link attention) mailbox command.

DATA: None

ACTION: None required.

elx_mes0397: The mbuf allocation failed

DESCRIPTION: The asynchronous link event handler could not allocate DMA-able memory for the READ_LA mailbox command.

DATA: None

ACTION: None required.

elx_mes0398: Invalid link fault code: < hex link_fault>

DESCRIPTION: The attempt to read the link attention register has returned an unknown value.

DATA: None

ACTION: None required.

elx_mes0399: Invalid link attention type: <hex link_type>

DESCRIPTION: The READ_LA mailbox command has returned an invalid link type.

DATA: None

ACTION: None required.

Initialization Events (0400 - 0599)

elx_mes0400: Phys Attribute Count Exceeded, Max %d, Actual %d

DESCRIPTION: Too many driver configuration parameters have been set. The limit is given as Max.

DATA: (1) Maximum number (2) Actual number

ACTION: Reduce the number of actual parameters.

elx_mes0402: Cannot find virtual addr for buffer tag on ring <ringno>

DESCRIPTION: A DMA buffer is not available for this unsolicited command.

DATA: (1) tag, (2) next, (3) prev, (4) postbufq_cnt

ACTION: None required.

elx_mes0403: lpfc_nodev_tmo attribute cannot be set to <val>, allowed range is [<LPFC_MIN_DEVLOSS_TMO>, <LPFC_MAX_DEVLOSS_TMO>]

DESCRIPTION: Attempt to set the nodev timeout value is outside the range of the devloss timeout range.

DATA: None

ACTION: Set the nodev timeout between the minimum and maximum devloss timeout range.

elx_mes0404: Config Param %s set to x%x

DESCRIPTION: Driver is setting a persistent VPort parameter to a new value

DATA: (1) New value

ACTION: None. This message is notification only.

elx_mes0405: Config Param %s set to x%x

DESCRIPTION: Driver is setting a persistent VPort parameter to a new value.

DATA: (1) New value

ACTION: None. This message is notification only.

elx_mes0406: Adapter maximum temperature exceeded (<temperature>), taking this port offline

DESCRIPTION: The driver has received an error for the adapter indicating that the maximum allowable temperature has been exceeded.

DATA: (1) work_hs, (2) work_status[0], (3) work_status[1]

ACTION: Ensure the server fans are not blocked. Shut down the server if the airflow is restricted.

elx_mes0410: Cannot find virtual addr for mapped buf on ring <ringno>

DESCRIPTION: The driver cannot find the specified buffer in its mapping table. Thus it cannot find the virtual address needed to access the data.

DATA: (1) phys, (2) next, (3) prev, (4) postbufq_cnt

ACTION: This error could indicate a software driver or firmware problem. If the problem persists report these errors to Technical Support.

elx_mes0423: Vport Attribute Instance Error. Defaulting lpfc_attr to %d, error value %d, allowed range is [min, max]

DESCRIPTION: A Vport attribute was set out of range. The driver reset the parameter to its default.

DATA: None

ACTION: Set the module parameter between the minimum and maximum values.

elx_mes0424: Vport Attribute Count Exceeded, Max %d, Actual %d

DESCRIPTION: The total number of Vport attributes set exceeded the max allowed.

DATA: None

ACTION: Reduce the number set attributes below max.

elx_mes0425: lpfc_"#attr" attribute cannot be set to %d, allowed range is [min, max]

DESCRIPTION: Driver attribute lpfc_#attr was defined with an out-of-range value.

DATA: None

ACTION: Set the parameter between the minimum and maximum value.

elx_mes0427: Cannot re-enable interrupt after slot reset.

DESCRIPTION: The driver was not able to enable the interrupt after an adapter reset.

DATA: None

ACTION: Unload and reload the driver.

elx_mes0430: PM resume Failed to enable interrupt

DESCRIPTION: The driver's power management resume function could not enable the interrupt.

DATA: None

ACTION: Perform another PM suspend and resume or adapter reset.

elx_mes0431: Failed to enable interrupt.

DESCRIPTION: The driver failed to start the interrupt.

DATA: None

ACTION: Unload and reload the driver.

elx_mes0433: Wakeup on signal: rc=<rc>

DESCRIPTION: A signal other than the LPFC_DATA_READY was received on the worker thread. DATA: None

ACTION: Unload and reload the driver.

elx_mes0434: PM resume failed to start worker thread: error=<error>.

DESCRIPTION: The driver's power management resume function could not start the worker thread.

DATA: None

ACTION: Unload and reload the driver.

elx_mes0435: Adapter failed to get Option ROM version status <rc>.

DESCRIPTION: The driver could not read the adapter's option ROM.

DATA: None

ACTION: Reset the adapter. Ensure the adapter's firmware is current.

elx_mes0436: Adapter failed to init, timeout, status reg <status>

DESCRIPTION: The adapter failed during powerup diagnostics after it was reset.

DATA: None

ACTION: This error could indicate a hardware or firmware problem. If the problem persists, report the error to Technical Support.

elx_mes0437: Adapter failed to init, chipset, status reg <status>

DESCRIPTION: The adapter failed during powerup diagnostics after it was reset.

DATA: None

ACTION: This error could indicate a hardware or firmware problem. If the problem persists, report the error to Technical Support.

elx_mes0438: Adapter failed to init, chipset, status reg <status>

DESCRIPTION: The adapter failed during powerup diagnostics after it was reset.

DATA: None

ACTION: This error could indicate a hardware or firmware problem. If the problem persists, report the error to Technical Support.

elx_mes0439: Adapter failed to init, mbxCmd <mbxCommand> READ_REV, mbxStatus <mbxStatus>

DESCRIPTION: Adapter initialization failed when issuing a READ_REV mailbox command.

DATA: None

ACTION: This error could indicate a hardware or firmware problem. If the problem persists, report the error to Technical Support.

elx_mes0440: Adapter failed to init, READ_REV has missing revision information

DESCRIPTION: A firmware revision initialization error was detected.

DATA: None

ACTION: This error could indicate a hardware or firmware problem. Update the firmware. If the problem persists, report the error to Technical Support.

elx_mes0442: Adapter failed to init, mbxCmd <mbxCommand> CONFIG_PORT, mbxStatus <mbxStatus>

DESCRIPTION: Adapter initialization failed when issuing a CONFIG_PORT mailbox command.

DATA: (1) hbaunit

ACTION: This error could indicate a hardware or firmware problem. If the problem persists, report the error to Technical Support.

elx_mes0443: Adapter failed to set maximum DMA length mbxStatus <u.mb.mbxStatus>.

DESCRIPTION: Cannot set the maximum DMA length to reflect cfg_pci_max_read.

DATA: None

ACTION: Set module parameter lpfc_pci_max_read to 512, 1024, 2048, or 4096.

elx_mes0445: Firmware initialization failed.

DESCRIPTION: The driver was unable to initialize the hardware.

DATA: None

ACTION: This error could indicate a hardware or firmware problem. If the problem persists, report the error to Technical Support.

elx_mes0446: Adapter failed to init, mbxCmd <mbxCommand> CFG_RING, mbxStatus <mbxStatus>, ring <num>

DESCRIPTION: Adapter initialization failed when issuing a CFG_RING mailbox command.

DATA: None

ACTION: This error could indicate a hardware or firmware problem. If the problem persists, report the error to Technical Support.

elx_mes0448: Adapter failed to init, mbxCmd <mbxCommand> READ_SPARM, mbxStatus <mbxStatus>

DESCRIPTION: Adapter initialization failed when issuing a READ_SPARM mailbox command.

DATA: None

ACTION: This error could indicate a hardware or firmware problem. If the problem persists, report the error to Technical Support.

elx_mes0449: Phys attribute Instance Error. Defaulting to lpfc_attr to %d. Allowed range is [min, max]

DESCRIPTION: A physical device attribute has an out-of-range value. The driver is correcting it.

DATA: (1) value written, (2) minimum value, (3) maximum value

ACTION: Write the default value.

elx_mes0450: lpfc_attr attribute cannot be set to %d, allowed range is [%min, %max]

DESCRIPTION: Sysfs attribute value written exceeds attribute range

DATA: (1) attribute name, (2) value written, (3) minimum value, (3) maximum value

ACTION: Write a value within the supported range.

elx_mes0453: Adapter failed to init, mbxCmd <mbxCommand> READ_CONFIG, mbxStatus<mbxStatus>

DESCRIPTION: Adapter initialization failed when issuing a READ_CONFIG mailbox command.

DATA: None

ACTION: This error could indicate a hardware or firmware problem. If the problem persists, report the error to Technical Support.

elx_mes0454: Adapter failed to init, mbxCmd <mbxCommand> INIT_LINK, mbxStatus <mbxStatus>

DESCRIPTION: Adapter initialization failed when issuing an INIT_LINK mailbox command.

DATA: None

ACTION: This error could indicate a hardware or firmware problem. If the problem persists, report the error to Technical Support.

elx_mes0456: Adapter failed to issue ASYNCEVT_ENABLE mbox status <rc>.

DESCRIPTION: The mailbox command to enable an asynchronous event notification failed.

DATA: None

ACTION: Ensure the adapter firmware is current. Reload the driver.

elx_mes0457: Adapter Hardware Error

DESCRIPTION: The driver received an interrupt indicating a possible hardware problem.

Data: (1) status, (2) status1, (3) status2

ACTION: This error could indicate a hardware or firmware problem. If the problem persists, report the error to Technical Support.

elx_mes0459: Adapter heartbeat failure, taking this port offline.

DESCRIPTION: The Heartbeat mailbox command failed.

DATA: None

ACTION: Ensure the adapter firmware is current. Reload the driver.

elx_mes0472: Unknown PCI error state: x%x

DESCRIPTION: The PCI bus has detected an error.

DATA: (1) state value

ACTION: Driver resets the adapter and attempts recovery. If problem persists, contact Emulex technical support.

elx_mes0474: Unable to allocate memory for issuing "MBOX_CONFIG_MSI command"

DESCRIPTION: Mailbox memory pool allocation error.

DATA: None

ACTION: None required.

elx_mes0475: Not configured for supporting MSI-X cfg_use_msi: <cfg_use_msi>.

DESCRIPTION: The lpfc_use_msi module parameter should have been set to 2.

DATA: None

ACTION: Set module parameter lpfc_use_msi=2.

elx_mes0476: HBA not supporting SLI-3 or later SLI Revision: <sli_rev>.

DESCRIPTION: The adapter does not support SLI-3 or SLI-4.

DATA: None

ACTION: This adapter does not support msi. Set lpfc_use_msi=0.

elx_mes0479: Deferred Adapter Hardware Error

DESCRIPTION: An adapter hardware error was sent to the driver.

DATA: (1) work_hs, (2) work_status[0], (3) work_status[1]

ACTION: Perform a dump using hbacmd.

elx_mes0483: Invalid link-attention link speed: x%x", bf_get(lpfc_acqe_link_speed, acqe_link).

DESCRIPTION: The link speed reported in the link attention interrupt is invalid.

DATA: None

ACTION: Check the switch configuration.

elx_mes0493: SLI_CONFIG_SPECIAL mailbox failed with status <rc>.

DESCRIPTION: Mailbox command failed.

DATA: None

ACTION: Ensure the adapter's firmware is current. Unload and reload the driver.

elx_mes0494: Unable to allocate memory for issuing "SLI_FUNCTION_RESET mailbox command"

DESCRIPTION: Mailbox memory pool allocation error.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0495: SLI_FUNCTION_RESET mailbox failed with status <shdr_status> add_status <shdr_add_status>, mbx status <rc>.

DESCRIPTION: Mailbox command failed.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0496: Failed allocate slow-path EQ

DESCRIPTION: The event queue for the slow path was not allocated.

DATA: None

ACTION: Unload and reload the driver.

elx_mes0497: Failed allocate fast-path EQ

DESCRIPTION: The event queue for the fast path was not allocated.

DATA: None

ACTION: Unload and reload the driver.

elx_mes0499: Failed allocate fast-path FCP CQ (<fcp_cqid>).

DESCRIPTION: The completion queue event for the fast path could not be allocated.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0500: Failed allocate slow-path mailbox CQ

DESCRIPTION: Failed to allocate slow-path mailbox CQ.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0501: Failed allocate slow-path ELS CQ

DESCRIPTION: Failed to allocate slow-path ELS CQ.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0503: Failed allocate fast-path FCP

DESCRIPTION: Failed to allocate fast-path FCP.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0504: Failed allocate slow-path ELS WQ

DESCRIPTION: Failed to allocate slow-path ELS WQ.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0505: Failed allocate slow-path MQ

DESCRIPTION: Failed to allocate slow-path MQ.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0506: Failed allocate receive HRQ

DESCRIPTION: Failed to allocate receive HRQ.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0507: Failed allocate receive DRQ

DESCRIPTION: Failed to allocate receive DRQ.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0520: Slow-path EQ not allocated

DESCRIPTION: The slow-path EQ is not allocated.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0521: Failed setup of slow-path EQ rc = 0x%x

DESCRIPTION: The slow-path EQ setup failed with status rc.

DATA: (1) status code

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0522: Fast-path EQ <fcp_eqidx> not allocated

DESCRIPTION: The fast-path EQ is not allocated.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0523: Failed setup of fast-path EQ <fcp_eqidx>, rc = <rc>

DESCRIPTION: The fast-path EQ setup failed.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0526: Fast-path FCP CQ <fcp_cqidx> not allocated

DESCRIPTION: The fast-path FCP is not allocated.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0527: Failed setup of fast-path FCP CQ <fcp_cqidx>, rc = <rc>

DESCRIPTION: The fast-path FCP CQ setup failed.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0528: Mailbox CQ not allocated

DESCRIPTION: The mailbox CQ is not allocated.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0530: ELS CQ not allocated

DESCRIPTION: The ELS CQ is not allocated.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0531: 0531 Failed setup of slow-path ELS CQ: rc = 0x%x

DESCRIPTION: The ELS CQ is allocated, but failed initial setup.

DATA: (1) status

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0534: Fast-path FCP WQ <fcp_eqidx> not allocated

DESCRIPTION: The fast-path FCP WQ is not allocated.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0535: Failed setup of fast-path FCP WQ <fcp_wqidx>, rc = <rc>

DESCRIPTION: The fast-path FCP WQ setup failed.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0536: Slow-path ELS WQ not allocated

DESCRIPTION: The slow-path ELS WQ is not allocated.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0538: Slow-path MQ not allocated

DESCRIPTION: The slow-path MQ is not allocated.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0539: Failed setup of slow-path MQ: rc = 0x%x

DESCRIPTION: The slow-path MQ is allocated, but failed initial setup

DATA: (1) status

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0540: Receive Queue not allocated

DESCRIPTION: The Receive Queue is not allocated.

DATA: None

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0541: Failed setup of Receive Queue: rc = 0x%x

DESCRIPTION: The Receive Queue is allocated, but failed setup.

DATA: (1) status

ACTION: The driver fails to load. Contact Emulex Technical Support.

elx_mes0542: lpfc_create_static_vport failed to allocate mailbox memory

DESCRIPTION: Failed to allocate mailbox memory for VPort creation.

DATA: None

ACTION: Static VPorts does not load. Contact Emulex Technical Support.

elx_mes0543: lpfc_create_static_vport failed to allocate vport_info

DESCRIPTION: Failed to allocate VPort_info.

DATA: None

ACTION: Static VPorts does not load. Contact Emulex Technical Support

elx_mes0545: lpfc_create_static_vport bad information header 0x%x 0x%x, le32_to_cpu(vport_info->signature), le32_to_cpu(vport_info->rev) & VPORT_INFO_REV_MASK);

DESCRIPTION: Invalid information header; the signature or revision is invalid.

DATA: None

ACTION: Static VPorts does not load. Contact Emulex Technical Support.

elx_mes0582: Error <rc> during sgl post operation

DESCRIPTION: The SGL post operation failed.

DATA: None

ACTION: None required.

elx_mes0602: Failed to allocate CQ_EVENT entry

DESCRIPTION: Failed to allocate a CQ_EVENT entry.

DATA: None

ACTION: None required.

elx_mes0603: Invalid work queue CQE subtype <subtype>

DESCRIPTION: Invalid work queue CQE.

DATA: None

ACTION: None required.

FCP Traffic History (0700 - 0799)

elx_mes0700: Bus Reset on target <i> failed

DESCRIPTION: The bus reset for the specified target failed.

DATA: None

ACTION: None required.

elx_mes0706: 0706 IOCB Abort failed - outstanding %d failed %d

DESCRIPTION: The driver did not recover all IO following a reset task management command

DATA: (1) outstanding IO count (2) number of unrecovered IO

ACTION: Reset call fails to. ESX tries to recover.

elx_mes0713: SCSI layer issued Device Reset (%d, %d) reset status x%x flush status x%x

DESCRIPTION: A device reset has completed on (tgt, lun). Status values are displayed.

DATA: (1) tgt (2) lun (3) task mgmt status (4) flush status

ACTION: None required.

elx_mes0714: SCSI layer issued bus reset

DESCRIPTION: The SCSI layer is requesting the driver to abort all I/Os to all targets on this adapter.

DATA: (1) ret

ACTION: Check the state of the targets in question.

elx_mes0718: Unable to dma_map single request_buffer: x%x

DESCRIPTION: The driver could not map a single virtual address to a dma address.

DATA: (1) dma mapping error

ACTION: None. The driver fails the IO back to ESX.

elx_mes0721: Device Reset rport failure: rdata <rdata>

DESCRIPTION: The reset of the Rport failed.

DATA: None

ACTION: None required.

elx_mes0724: I/O flush failure for context <cntx> on <tgt:lun> cnt x%x

DESCRIPTION: The I/O flush to the {LUN, TARGET or HOST} has failed.

DATA: (1) cnt of unrecovered IO

ACTION: None required. The reset is retried.

elx_mes0727: TMF <cmd> to TGT <TGT#> LUN <LUN#> failed (<ulpStatus>, <ulpWord[4]>)

DESCRIPTION: The task management command failed.

DATA: None

ACTION: None required. The TMF command gets retried.

elx_mes0748: Abort handler timed out waiting for abort to complete:ret <status> ID <target id>

LUN <lun id> snum <serial number>

DESCRIPTION: The abort handler timed out waiting for abort to complete.

DATA: None

ACTION: None required.

Node Table Events (0900 - 0999)

elx_mes0915: Register VPI failed: <mbxStatus>

DESCRIPTION: Could not register the VPI.

DATA: None

ACTION: None required.

Miscellaneous and FCoE Events (1200 - 1299)

elx_mes1262: Failed to allocate dfc_host

DESCRIPTION: Could not allocate memory the dfc_host_struct.

DATA: None

ACTION: None required.

Link Events (1300 - 1399)

elx_mes1303: Link Up Event <eventTag> received Data: x%x x%x x%x x%x x%x x%x %d

DESCRIPTION: A link up event was received. It is also possible for multiple link events to be received together.

DATA: (1) fc_eventTag, (2) granted_AL_PA, (3) UlnkSpeed, (4) alpa_map[0]

ACTION: If numerous link events are occurring, check the physical connections to the Fibre Channel network.

elx_mes1305: Link Down Event <eventTag> received Data: x%x x%x x%x

DESCRIPTION: A link down event was received.

DATA: (1) fc_eventTag, (2) hba_state, (3) fc_flag

ACTION: If numerous link events are occurring, check the physical connections to the Fibre Channel network.

elx_mes1306: Link Up Event in loop back mode<eventTag> received Data: x%x x%x x%x x%x

DESCRIPTION: Link up notification; configured for loopback.

DATA: (1) fc_eventTag, (2) granted_AL_PA, (3) UlnkSpeed, (4) alpa_map[0]

ACTION: None required.

elx_mes1308: Menlo Maint Mode Link up Event x%x rcvd Data: x%x x%x x%x

DESCRIPTION: Link up notification in Menlo maintenance mode.

DATA: (1) fc_eventTag, (2) port_state, (3) VPort fc_flag

ACTION: None required.

elx_mes1309: Link Down Event x%x received Data x%x x%x x%x

DESCRIPTION: The port generated a link down event to the host.

DATA: (1) fc_eventTag (2)port_state (3) VPort fc_flag

ACTION: None required.

elx_mes1310: Link Up Event npiv not supported in loop topology

DESCRIPTION: Loop topologies are not supported when NPIV is enabled.

DATA: None

ACTION: Put link into fabric mode.

Reserved (1400 - 1499)

elx_mes1400: Failed to initialize sgl list.

DESCRIPTION: Failed to initialize SGL list during initialization.

DATA: None

ACTION: Reboot the server. If the issue persists, contact technical support.

elx_mes1401: Failed to enable pci device.

DESCRIPTION: Failed to enable PCI device during initialization.

DATA: None

ACTION: Reboot the server. If the issue persists, contact technical support.

elx_mes1402: Failed to set up pci memory space.

DESCRIPTION: PCI initialization failed.

DATA: None

ACTION: Reboot the server. If the issue persist, contact technical support.

elx_mes1403: Failed to set up driver resource.

DESCRIPTION: Driver resource initialization failed.

DATA: None

ACTION: None required.

elx_mes1404: Failed to set up driver resource.

DESCRIPTION: Driver resource initialization failed.

DATA: None

ACTION: None required.

elx_mes1405: Failed to initialize iocb list.

DESCRIPTION: IOCB initialization failed.

DATA: None

ACTION: None required.

elx_mes1406: Failed to set up driver resource.

DESCRIPTION: Initialization failed to set up driver resource.

DATA: None

ACTION: None required.

elx_mes1407: Failed to create scsi host.

DESCRIPTION: Initialization failed to create SCSI host.

DATA: None

ACTION: None required.

elx_mes1408: Failure HBA POST Status: sta_reg=<status reg>, perr=<port error>, sfi=<sfi reg>, nip=<nip reg>, ipc=<ipc reg>, xrom=<xrom>, dl=<dl reg>, pstatus=<port status>

DESCRIPTION: The adapter's power on self test has failed.

DATA: None

ACTION: Make sure the adapter firmware is up to date. Contact the technical support if the issue persists after system reboot.

elx_mes1409: Failed to enable pci device.

DESCRIPTION: Failed to enable PCI device during initialization.

DATA: None

ACTION: None required.

elx_mes1410: Failed to set up pci memory space.

DESCRIPTION: Initialization failed to set up PCI memory space.

DATA: None

ACTION: None required.

elx_mes1411: Failed to set up driver resource.

DESCRIPTION: Initialization failed to set up driver resource.

DATA: None

ACTION: None required.

elx_mes1412: Failed to set up driver resource.

DESCRIPTION: Initialization failed to set up driver resource.

DATA: None

ACTION: None required.

elx_mes1413: Failed to initialize iocb list.

DESCRIPTION: Initialization failed to initialize the IOCB list.

DATA: None

ACTION: None required.

elx_mes1414: Failed to set up driver resource.

DESCRIPTION: Initialization failed to set up driver resource.

DATA: None

ACTION: None required.

elx_mes1415: Failed to create scsi host.

DESCRIPTION: Initialization failed to create SCSI host.

DATA: None

ACTION: None required.

elx_mes1416: Failed to allocate sysfs attr

DESCRIPTION: Initialization failed to sysfs attribute.

DATA: None

ACTION: None required.

elx_mes1418: Invalid HBA PCI-device group: <dev_grp>

DESCRIPTION: Invalid adapter PCI-device group detected.

DATA: None

ACTION: None required.

elx_mes1419: Invalid HBA PCI-device group: <dev_grp>

DESCRIPTION: Invalid adapter PCI-device group detected.

DATA: None

ACTION: None required.

elx_mes1420: Invalid HBA PCI-device group: <dev_grp>

DESCRIPTION: Invalid adapter PCI-device group detected.

DATA: None

ACTION: None required.

elx_mes1421: Failed to set up hba

DESCRIPTION: Initialization failed to set up the adapter.

DATA: None

ACTION: None required.

elx_mes1422: HBA Unrecoverable error: uerr_lo_reg=<ue lo>, uerr_hi_reg=<ue hi>, online0_reg=<Online0>, online1_reg=<Online1>

DESCRIPTION: The adapter has notified the driver that it has encountered an unrecoverable error.

DATA: None

ACTION: A dump from the OneCommand Manager application should be taken. Then, the driver should be unloaded and reloaded.

elx_mes1423: HBA Unrecoverable error: uerr_lo_reg=<ue lo>, uerr_hi_reg=<ue hi>, online0_reg=<Online0>, online1_reg=<Online1>.

DESCRIPTION: The adapter has notified the driver that it has encountered an unrecoverable error.

DATA: None

ACTION: A dump from the OneCommand Manager application should be taken. Then, unload and reload the driver.

elx_mes1424: Invalid PCI device group: <pci_dev_grp>

DESCRIPTION: Invalid adapter PCI-device group detected.

DATA: None

ACTION: None required.

elx_mes1425: Invalid PCI device group: <pci_dev_grp>

DESCRIPTION: Invalid adapter PCI-device group detected.

DATA: None

ACTION: None required.

elx_mes1426: Invalid PCI device group: <pci_dev_grp>

DESCRIPTION: Invalid adapter PCI-device group detected.

DATA: None

ACTION: None required.

elx_mes1427: Invalid PCI device group: <pci_dev_grp>

DESCRIPTION: Invalid adapter PCI-device group detected.

DATA: None

ACTION: None required.

elx_mes1428: Invalid PCI device group: <pci_dev_grp>

DESCRIPTION: Invalid adapter PCI-device group detected.

DATA: None

ACTION: None required.

elx_mes1429: Invalid PCI device group: <pci_dev_grp>

DESCRIPTION: Invalid adapter PCI-device group detected.

DATA: None

ACTION: None required.

elx_mes1430: Failed to initialize sgl list.

DESCRIPTION: Failed to initialize SGL list.

DATA: None

ACTION: None required.

elx_mes1431: Invalid HBA PCI-device group: <dev_grp>

DESCRIPTION: Invalid adapter PCI-device group detected.

DATA: None

ACTION: None required.

elx_mes1432: Failed to initialize rpi headers.

DESCRIPTION: RPI headers required by the firmware failed to initialize.

DATA: None

ACTION: None required.

elx_mes1476: Failed to allocate sysfs attr.

DESCRIPTION: Failed to allocate sysfs attribute.

DATA: None

ACTION: None required.

elx_mes1477: Failed to set up hba

DESCRIPTION: Failed to set up adapter.

DATA: None

ACTION: None required.

IOCTL Events (1600 - 1699)

None.

VPort Events (1800 - 1832)

elx_mes1800 Could not issue unreg_vpi

DESCRIPTION: Driver attempt to unregister VPI failed

DATA: None

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes1802 HBQ <index>: local_hbqGetIdx <index> is > than hbqp->entry_count <count>

DESCRIPTION: An error occurred when processing queue related to an adapter in a particular slot.

DATA: (1) hbqno, (2) local_hbqGetIdx, (3) entry_count

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes1803 Bad hbq tag. Data: <tag> <count>

DESCRIPTION: An error occurred when processing queue related tags for an adapter in a particular slot.

DATA: (1) tag, (2) buffer_count

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes1804: Invalid asynchronous event code: <evt code>

DESCRIPTION: The asynchronous event code that the firmware passed to the driver is invalid.

DATA: None

ACTION: None required.

elx_mes1805 Adapter failed to init.Data: <command> <status> <queue num>

DESCRIPTION: An error occurred when processing queue related tags for an adapter in a particular slot.

DATA: (1) mbxCommand, (2) mbxStatus, (3) hbaqno

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes1806 Mbox <command> failed. No vport.

DESCRIPTION: A mailbox command could not be communicated because there was no VPort associated with the mailbox command.

DATA: (1) mbxCommand

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes1807 IOCB <value> failed. No vport

DESCRIPTION: An IOCB command could not be communicated because there was no VPort associated with the mailbox command.

DATA: (1) ulpCommand

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes1808 Create VPORT failed: NPIV is not enabled: SLImode <mode>

DESCRIPTION: The driver failed to create a port because the adapter was in wrong mode or was not capable of NPIV.

DATA: (1) sli_rev

ACTION: Load the driver with npiv enabled on an adapter that supports SLI-3.

elx_mes1809 Create VPORT failed: Max VPORTs (<vpi>) exceeded.

DESCRIPTION: The driver failed to create a port because the maximum number of port supported by the driver is exceeded.

DATA: (1) max_vpi

ACTION: No Action. The driver can not create any more VPorts.

elx_mes1810 Create VPORT failed: Cannot get instance number.

DESCRIPTION: The driver failed to allocate resources for an adapter and could not assign an instance number

DATA: None

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes1811 Create VPORT failed: vpi x<vpi>

DESCRIPTION: The driver failed to create a port and had to eliminate all its resources.

DATA: (1) vpi

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes1812 vport_delete failed: Cannot delete physical host

DESCRIPTION: An attempt to delete a port failed because it was to delete a physical port and not a virtual port. Only VPorts on physical ports can be deleted on an NPIV system.

DATA: None

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes1813 Create VPORT failed. Cannot get sparam.

DESCRIPTION: The port could not be created because it could not be initialized possibly due to unavailable resources.

DATA: None

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes1814: Mbox <u.mb.mbxCommand> failed, no vport

DESCRIPTION: The VPort field of this mailbox command was not completed.

DATA: None

ACTION: None required.

elx_mes1815 Could not issue unreg_did (default rpis)

DESCRIPTION: Attempt to unregister RPI failed.

DATA: None

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes1818 VPort failed init, mbxCmd <mailbox command> READ_SPARM mbxStatus

<mailbox status>, rc = <status>

DESCRIPTION: A pending mailbox command issued to initialize port failed.

DATA: (1) mbxCmd, (2) mbxStatus, (3) rc

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes1820 Unable to select SLI-3. Not supported by adapter.

DESCRIPTION: The adapter is not capable of operating in a given mode.

DATA: None

ACTION: This is an informational message. SLI-3 mode is only available on some adapters. Do not attempt to force an adapter to run in SLI mode 3 if that adapter does not support SLI-3 mode. Adapters that do not support SLI-3 are configured to run in SLI-2 mode. Nevertheless, it is recommended to use the auto setting (0).

elx_mes1821 Create VPORT failed. Invalid WWN format

DESCRIPTION: The port could not be created due to an invalid WWNN or WWPNN format.

DATA: None

ACTION: Provide a valid WWN when creating VPorts.

elx_mes1822 Invalid <name>: <xx: xx: xx: xx: xx: xx: xx: xx>

DESCRIPTION: An invalid WWN was used when creating a VPort.

DATA: (1) type_name, (2) wwn[1], (3) wwn[3], (3) wwn[5], (4) wwn[7]

ACTION: When creating a VPort you must furnish a valid WWN.

elx_mes1823 Create VPORT failed. Duplicate WWN on HBA.

DESCRIPTION: The port could not be created because it would duplicate an existing WWNN adapter address. The resources for the port had to be discarded.

DATA: None

ACTION: Provide a WWN that is unique.

elx_mes1824 NPIV enabled: Override lpfc_sli_mode parameter (<mode>) to auto(0)

DESCRIPTION: The lpfc_enable_npiv and lpfc_sli_mode driver parameter settings conflict. The adapter must be configured for SLI-3 mode to support NPIV.

DATA: (1) lpfc_sli_mode

ACTION: This is an informational message that indicates that the lpfc_enable_npiv and lpfc_sli_mod parameter settings are not compatible. Resolve the parameter conflict by setting the SLI mode to 0 or 3 or, if SLI-2 mode is required then disable NPIV.

elx_mes1825 Vport Created.

DESCRIPTION: This message is displayed to indicate that a port was created in the system. It is displayed at this level to ensure it is always appears at all log levels.

DATA: None

ACTION: No action, informational.

elx_mes1826 Vport Disabled.

DESCRIPTION: The port had to be disabled in the system.

DATA: None

ACTION: No action, informational.

elx_mes1827 Vport Enabled.

DESCRIPTION: The port had to be enabled after possible recovery from some errors.

DATA: None

ACTION: No action, informational.

elx_mes1828 Vport Deleted.

DESCRIPTION: A VPort was deleted.

DATA: None

ACTION: No action, informational.

elx_mes1829 CT command failed to delete objects on fabric.

DESCRIPTION: A command issued to the fabric to delete an associated resource for an object such as for a port, failed.

DATA: None

ACTION: Software driver error. If this problem persists, report these errors to Technical Support.

elx_mes1830 Signal aborted mbxCmd <command>

DESCRIPTION: A pending mailbox command was aborted because the thread received a signal.

DATA: None

ACTION: The command is retried.

elx_mes1831 Create VPORT Interrupted.

DESCRIPTION: The port creation process was unexpectedly interrupted at a critical time and the operation was unsuccessful.

DATA: None

ACTION: The process was interrupted while creating a VPort. Retry the command.

elx_mes1832: No pending MBOX command to handle.

DESCRIPTION:

DATA: None

ACTION:

ELS Events (1833 - 2800)

elx_mes1835: Vport discovery quiesce failed: state <port_state> fc_flags <fc_flag> wait msec <jiffies_to_msecs(jiffies - start_time)>

DESCRIPTION: Could not pause discovery on this VPort.

DATA: None

ACTION: None required.

elx_mes1836: Could not issue unreg_login(all_rpis) status <rc>

DESCRIPTION: The unreg_login cannot be issued.

DATA: None

ACTION: None required.

elx_mes1837: vport_delete failed: Cannot delete static vport.

DESCRIPTION: Static VPorts cannot be deleted.

DATA: None

ACTION: None required.

elx_mes1838: Failed to INIT_VPI on vpi <vpi> status <rc>

DESCRIPTION: Failed to INIT_VPI.

DATA: None

ACTION: None required.

elx_mes2000: Failed to allocate mbox for READ_FCF cmd

DESCRIPTION: Failed to allocate mbox for READ_FCF command.

DATA: None

ACTION: None required.

elx_mes2001: Unable to allocate memory for issuing SLI_CONFIG_SPECIAL mailbox command

DESCRIPTION: Unable to allocate memory for issuing the SLI_CONFIG_SPECIAL mailbox command.

DATA: None

ACTION: None required.

elx_mes2002: Error Could not grow rpi count

DESCRIPTION: An error occurred because the RPI count could not be increased.

DATA: None

ACTION: None required.

elx_mes2005: Unable to deregister pages from HBA: <rc>

DESCRIPTION: The SGL pages could not be unregistered from the firmware.

DATA: None

ACTION: None required.

elx_mes2007: Only Limited Edition cmd Format supported <iocb.ulpCommand>

DESCRIPTION: SLI-4 only supports the Limited Edition command format.

DATA: None

ACTION: None required.

elx_mes2008: Error <rc> posting all rpi headers

DESCRIPTION: The RPI headers could not be posted to the firmware.

DATA: None

ACTION: None required.

elx_mes2009: Failed to allocate mbox for ADD_FCF cmd

DESCRIPTION: Failed to allocate mailbox for ADD_FCF command.

DATA: None

ACTION: None required.

elx_mes2010: Resume RPI Mailbox failed status <status>, mbxStatus <mbx status>.

DESCRIPTION:

DATA: None

ACTION: None required.

elx_mes2011: Unable to allocate memory for issuing SLI_CONFIG_SPECIAL mailbox command

DESCRIPTION: Unable to allocate memory for issuing SLI_CONFIG_SPECIAL mailbox command.

DATA: None

ACTION: None required.

elx_mes2012: Mailbox failed , mbxCmd <mbx_cmd> READ_CONFIG, mbxStatus <mbx status>.

DESCRIPTION: The READ_CONFIG mailbox command failed.

DATA: None

ACTION: None required.

elx_mes2013: Could not manually add FCF record 0, status <rc>

DESCRIPTION: Could not add FCF record to the FCF list.

DATA: None

ACTION: None required.

elx_mes2014: Invalid command <iocb.ulpCommand>

DESCRIPTION: The IOCB command is invalid.

DATA: None

ACTION: None required.

elx_mes2015: Invalid CT %x command <iocb.ulpCommand>

DESCRIPTION: Invalid Command-Type in the IOCB is not supported.

DATA: None

ACTION: None required.

elx_mes2017: REG_FCFI mbxStatus error <mbx status> HBA state <port_state>.

DESCRIPTION: The REG_FCFI mailbox command has failed.

DATA: None

ACTION: None required.

elx_mes2018: REG_VFI mbxStatus error <mbx status> HBA state <port_state>.

DESCRIPTION: The REG_VFI mailbox command has failed.

DATA: None

ACTION: None required.

elx_mes2020: Failed to allocate mbox for ADD_FCF cmd

DESCRIPTION: Failed to allocate mailbox for ADD_FCF command.

DATA: None

ACTION: None required.

elx_mes2022: INIT VPI Mailbox failed status <status>, mbxStatus <mbxStatus>

DESCRIPTION: The INIT VPI mailbox command has failed.

DATA: None

ACTION: None required.

elx_mes2401: Failed to allocate memory for ELS XRI management array of size <els_xri_cnt>.

DESCRIPTION: Initialization failed to allocate memory for the ELS XRI management array.

DATA: None

ACTION: None required.

elx_mes2500: EQ_CREATE mailbox failed with status <shdr_status> add_status <shdr_add_status>, mbx status <rc>

DESCRIPTION: The mailbox command sent to create the event queue has failed.

DATA: None

ACTION: None required.

elx_mes2501: CQ_CREATE mailbox failed with status <shdr_status> add_status <shdr_add_status>, mbx status <rc>

DESCRIPTION: The mailbox command sent to create the completion queue has failed.

elx_mes2751: Adapter failed to restart, status reg <status>,FW Data: A8 <0xA8> AC <0xAC>

DESCRIPTION: The adapter has failed to restart.

DATA: None

ACTION: If the problem persists, report the error to Technical Support.

elx_mes2752: KILL_BOARD command failed retval <retval>

DESCRIPTION: The KILL BOARD mailbox command failed to complete.

DATA: None

ACTION: If the problem persists, report the error to Technical Support.

elx_mes2753: PLOGI failure DID:<DID> Status:<Status>/<Extended Status>.

DESCRIPTION: A PLOGI to <DID> was failed either by the driver, firmware, or target. The <status> and <extended status> indicates why the PLOGI failed.

DATA: None

ACTION: If the problem persists, report the error to Technical Support.

elx_mes2754: PRLI failure DID:<DID> Status:<Status>/<Extended Status>.

DESCRIPTION: A PRLI to <DID> was failed either by the driver, firmware, or target. The <status> and <extended status> indicates why the PRLI failed.

DATA: None

ACTION: If the problem persists, report the error to Technical Support.

elx_mes2755: ADISC failure DID:<DID> Status:<Status>/<Extended Status>.

DESCRIPTION: A ADISC to <DID> was failed either by the driver, firmware, or target. The <status> and <extended status> indicates why the ADISC failed.

DATA: None

ACTION: If the problem persists, report the error to Technical Support.

elx_mes2756: LOGO failure DID:<DID> Status:<Status>/<Extended Status>.

DESCRIPTION: A LOGO to <DID> was failed either by the driver, firmware, or target. The <status> and <extended status> indicates why the LOGO failed.

DATA: None

ACTION: If the problem persists, report the error to Technical Support.

elx_mes2757: Protocol failure detected during processing of FCP I/O op: tgt <tgt ID> lun <LUN> cmdnd <CMD> rsplInfo3 <rsplInfo3>

DESCRIPTION: The FCP response from a target indicated that the response length is valid, but rsplInfo3 indicates that there is no Failure. This is a FCP spec violation by the target.

DATA: None

ACTION: If the problem persists, report the error to Technical Support.

elx_mes2758: Failed to allocate mempool for read FCF record mbox command.

DESCRIPTION: The driver failed to allocate memory from the mempool for issuing FCF read mailbox command during the round robin FCF bmask update.

DATA: None

ACTION: None required

elx_mes2759: Failed to allocate memory for round robin FCF failover bmask.

DESCRIPTION: The driver failed to allocate memory for the round robin FCF failover bmask.

DATA: None

ACTION: Make sure system has enough kernel memory, might need to reload the driver after memory problem resolved.

elx_mes2762: HBA reported FCF index go beyond driver bmask dimension.

DESCRIPTION: Adapter reports an FCF record index goes beyond the driver's internal resource dimension for the bmask.

DATA: None

ACTION: Inform Emulex about this.

elx_mes2763: Failed to allocate mempool for read FCF record mbox command.

DESCRIPTION: The driver failed to allocate memory from the mempool for issuing an FCF read mailbox command during the round robin FCF failover.

DATA: None

ACTION: None required

elx_mes2772: Failed to issue FCF rediscovery mailbox command due to dead FCF.

DESCRIPTION: The driver wanted to send an FCF rediscovery mailbox command to start fast FCF failover due to a dead FCF asynchronous event, but failed to send the mailbox command due to state of the adapter.

DATA: None

ACTION: None required

elx_mes2774: Failed to issue FCF rediscovery mailbox command due to CVL.

DESCRIPTION: The driver wanted to send an FCF rediscovery mailbox command to start fast FCF failover due to a Clear Virtual Link asynchronous event, but failed to send the mailbox command due to state of the adapter.

DATA: None

ACTION: None required

NIC Troubleshooting

This section includes NIC troubleshooting information.

Table 5: General Driver Situations, NIC

Problem	Answer/Solution
1. When there is a great deal of network traffic in some VMs, a few VMs appear to have lost network connectivity. 2. A lot of "alloc_skb() failed" messages appear in the log file: /proc/vmware/log	<p>This could be due to low configured value for netPktHeapMaxSize. Try increasing it to a higher value. To read the current value, run:</p> <pre># esxcfg-advcfg -j netPktHeapMaxSize</pre> <p>(A value of 0 indicates default - 64MB) To increase the size to (for example, 128 MB), run:</p> <pre># esxcfg-advcfg -k 128 netPktHeapMaxSize</pre> <p>(netPktHeapMaxSize can also be configured through VI Client using Configuration > Advanced Settings > VMKernel.) After configuring the size, reboot the system.</p>

Table 5: General Driver Situations, NIC (Continued)

Problem	Answer/Solution
Unable to ping from one VM to another VM.	OneConnect driver creates two vmnic interfaces - one for each port. If these interfaces are configured as uplinks in two separate vSwitches, the VMs in each of these switches are in separate networks with no network path between them. Thus, pinging between the VMs in the two groups fails. If you want all these VMs in the same network, configure them as teaming uplinks to one vSwitch option. Each of the vmnics, vmnic1 to vmnic16, must be configured in a separate vSwitch. In this configuration, there is no network path between the vSwitches and pinging between these VMs does not work.
When inserting or removing a 1Gb SFP-RJ45 module on a OneConnect adapter without RJ45 copper cables attached, the operating system indicates link up or down status. When inserting or removing copper cables attached to a switch to the module, link up or down events are not reported to the operating system.	There is no solution to this issue as the link status is not reported due to a PHY limitation on the card.
Flow control setting is not stored per port after rebooting the system.	With flow control, there is no persistence across reboot. It always starts with both RX and TX on. For persistence, run a config command from an RC file at reboot.

NIC Event/Error Logging

Retrieving NIC Error Log Codes

For ESX Server systems, the NIC OneConnect (be2net) driver generates error codes to the /var/log/vmkernel log file. The vmkernel log file is an ASCII text file and can be viewed and searched with a text editor such as vi. The vmkernel log file is automatically rotated as it gets larger, and the rotated log files are named vmkernel.x, where x is an integer.

To search the log file for error messages, at the command prompt, type:

```
# cd /var/log
# less vmkernel
```

For example, you might see the following message:

```
Sep 9 19:48:04 esx-server vmkernel: WARNING: Found a BE2 card in
Gen 1 x8 PCI-e slot. Should be in Gen 2, x8 slot for best
performance.
```

NIC Event Log Entries

The following is a list of ESX Server network event log error messages. It includes the severity of the error, the message displayed, and the message description. When reporting a problem with the OneConnect UCNA to Emulex, check the message log (/proc/vmware/log) and report any of these entries that may be present.

Note: In the following table, <D>, <DD>, or <DDD> in the 'Message Displayed' column refers to decimal values that appear in the actual error messages

Table 6: ESX Server NIC Event Log Entries

Severity	Message Displayed	Description
Error	BladeEngine POST failed	Power ON Self Test of the OneConnect UCNA failed. This indicates either a hardware or a firmware problem. Try rebooting the system after a reset.
Error	BladeEngine 2 initialization failed	Either the initialization of the OneConnect UCNA or the allocation of some resource for initializing the driver failed. In most cases, this message is accompanied by another more specific error message. Try rebooting the system after a power cycling. If the problem persists, this could indicate a hardware problem or corrupted firmware.
Warning	Using INTx interrupts. Net-Queues feature are disabled	The driver could not allocate MSIx vector for interrupt. The driver may continue to work, but the performance may be impacted.
Warning	WARNING: Found a BE2 card in Gen <D> x<D> PCI-e slot. Should be in Gen 2, x8 slot for best performance	OneConnect is a x8, Gen2 PCI-e device. For best performance, OneConnect should be installed in a Gen2 PCI-e slot 8 or 16 channels wide. The driver prints this warning if it finds the device in a slower or narrower PCI-e slot. The device continues to work with lesser performance.
Warning	Command to get pause frame settings failed	The firmware command to get PAUSE settings failed.
Warning	Command to set pause frame settings failed	The firmware command to change PAUSE settings failed.
Warning	Command to apply MAC address filter failed	Driver could not set the MAC address filter on the hardware. The device continues to work. There may be an impact on the performance.
Warning	Command to delete MAC address filter failed	The firmware command to delete a MAC address filter failed. The device should continue to work.
Warning	Unable to get Firmware Version	The command to get firmware revision number failed. The version number is not shown. The device must continue to work.
Warning	Did not receive completions for all TX requests	While unloading the driver, some outstanding transmit requests are found. This is an indication that the hardware is not functioning properly.
Warning	Failed to register char device	Could not create the char device used for certain management functions. The driver must still work. You may not be able to use HBACMD to interact with the device.

Table 6: ESX Server NIC Event Log Entries (Continued)

Severity	Message Displayed	Description
Warning	alloc_skb failed. Try increasing netPktHeapMaxSize	Could not allocate skb structure to send a frame received from the network to the OS. Transient failure can be ignored. Persistent message points to insufficient memory allocated for network heap. For example, to increase the heap size to 128MB, run: # esxcfg-advcfg -k 128 netPktHeapMaxSize
Warning	Invalid MTU requested. Must be between 64 and 8174 bytes.	Invalid MTU size in MTU configuration ioctl. The MTU is not changed.
Warning	Invalid vlan priority labeled. Must be 0 - 7	Request to set VLAN priority tag was made with invalid value.
Warning	Failed to allocate memory for pass through command	Memory allocation for pass through command failed. The driver should continue to function. The configuration utility that issued the pass through ioctl fails.
Warning	Pass through command failed. opcode <DDD>, status 0x<XXX>	The pass through firmware command with indicated opcode failed. The driver should continue to function. The configuration utility that issued the pass through ioctl fails.
Warning	Command to modify EQ delay failed	Firmware command to change the EQ delay failed. The driver continues to function. The adaptive interrupt coalescing does not function correctly.

NIC Adapter Firmware Error

The following POST message appears if you have loaded firmware on the OneConnect adapter that the controller does not support:

```
POST Error : Firmware halted. This firmware does not support this controller.
```

iSCSI Troubleshooting

The following table provides iSCSI troubleshooting information.

Table 7: General Driver Situations, iSCSI

Problem	Solutions
1. When logging into more than 139 targets, only 139 targets appear in vmkernel.	<p>ESX by default can only show 139 targets even if up to 256 are supported. To log into more than 139 targets and allow these targets to appear in vmkernel, you must configure the tunable parameter: <code>vmklinuxHeapMaxSizeMB</code></p> <p>There are two methods to set this tunable parameter:</p> <ul style="list-style-type: none"> On the command line Or, With VI Client. <p>To set the parameter by the command line option, set the value: <code>esxcfg-advcfg -k <MBS> vmklinuxHeapMaxSizeMB</code></p> <p>For example: <code>esxcfg-advcfg -k 48 vmklinuxHeapMaxSizeMB</code></p> <p>To set the parameter using VI Client: Under Configuration > Advanced Settings > vmkernel, set <code>VMKernel.Boot.vmklinuxHeapMaxSizeMB</code> to 48.</p> <p>Note: You must reboot the ESX machine for the change to take effect.</p>

Retrieving iSCSI Error Log Codes

For ESX systems, the iSCSI driver generates error codes to the `/var/log/vmkernel` log file. The vmkernel log file is an ASCII text file and can be viewed and searched with a text editor such as vim. The vmkernel log file is automatically rotated as it gets larger, and the rotated log files are named `vmkernel.x`, where `x` is an integer.

To search the log file for error messages, at the command prompt type:

```
# cd /var/log
```

```
# vim vmkernel
```

For example, you may see the following message:

```
Sep 9 19:48:04 esx-server vmkernel: BladeEngine 2 iSCSI Driver:
The be2iscsi driver received a Task Management Function that is
not supported and rejected this request. The error log entry
immediately following this entry will indicate the TMF function
code that was rejected.
```

iSCSI Error Log Code Entries

The following is a brief description of the error log codes generated by the iSCSI driver. It includes the message displayed, the meaning of the message, and the recommended resolution.

Table 8: iSCSI Error Log Code Entries

Message	Recommend Resolution
The be2iscsi driver failed to load because initialization failed during a power management bootstrap.	This failure may be due to the firmware not being present or not being running currently. This failure may also indicate a hardware problem.
The be2iscsi driver failed. It was unable to map one or more PCI Base Address Registers and hence failed to load.	This failure may indicate a low memory condition or a hardware error.
The be2iscsi driver ignored a configuration entry as the entry was invalid.	Check the registry configuration for any new entries added for Driver Parameters. The invalid entry must be removed or corrected.
The be2iscsi driver failed to load due to a memory allocation failure.	This failure occurred due to a failed memory allocation in the driver. Check low memory conditions.
The be2iscsi driver failed to load because initialization failed during normal bootstrap.	This failure may be due to the firmware not being present or running currently. This failure may also indicate a hardware problem.
An internal API failed in be2iscsi driver during initialization.	This failure may indicate a low memory condition.
There was an Unrecoverable Error detected by the be2iscsi driver. Following this error log entry, the next 3 entries will indicate the error codes.	This may be due to hardware errors or due to unhandled exceptions in the hardware or firmware.
The be2iscsi driver failed an IOCTL request since the number of scatter gather elements required for the IOCTL buffer exceeded the BladeEngine's firmware limit. Following this error log entry, the next entry will indicate the IOCTL opcode and the payload length requested.	This error may indicate an incorrect configuration option for the driver. It may also indicate a low memory condition.
The be2iscsi driver detected an error during offloading the iSCSI connection. The operation will be tried again. Following this error log entry, the next entry will indicate the session handle and the BladeEngine firmware error code.	This may indicate a target is in error or may point to transient network connectivity issues. It may also indicate a BladeEngine firmware error.
The be2iscsi driver did not receive an iSCSI command window update for up to 25 seconds during I/O operations. Following this error log entry, the next entry will indicate the session handle and the iSCSI parameters - MaxCmdSN and ExpCmdSN respectively.	Check for any errors reported at the target. The iSCSI Initiator is only supported with certified Targets. Check for software updates at the target vendor's website. If the above fails, contact your technical support.

Table 8: iSCSI Error Log Code Entries (Continued)

Message	Recommend Resolution
A connection to the target was lost for a period exceeding the Extended Timeout (ETO). The error log entry immediately following this entry will indicate the session ID or the target that lost the connection. There will be event log entries from the disk subsystem indicating that the drives were lost. If any I/Os were in progress, the system may see I/O errors or failures.	Check the connection to the target or the state of the target device. If the target is made available, any sessions that existed previously will be reestablished and the devices will be available for I/O.
The be2iscsi driver received a Task Management Function that is not supported and rejected this request. the error log entry immediately following this entry will indicate the TMF function code that was rejected.	The operating system version is not supported.
The be2iscsi driver encountered a mismatched version of the firmware running on the board. This error may be followed by more error codes 0x31840001 of 0x31880001 indicating that the be2iscsi driver failed to load.	This failure indicates that the driver version that is running on the system does not match the version of the firmware flashed on the board. See "Installing the NIC and iSCSI Drivers and Management Software" on page 4. Downgrade the driver to a version that is compatible with the firmware version currently on the adapter. Then, reboot the server, and follow the firmware upgrade procedure as appropriate. Finally, upgrade the driver to a version that is compatible with the new version of firmware.
The be2iscsi driver detected a failure in the hardware during initialization. This error may be followed by more error codes. 0x31840001 or 0x31880001 indicating that the be2iscsi driver failed to load.	This failure indicates that the hardware has not been initialized or is malfunctioning. this may also indicate that the firmware is not running correctly.
Both Port 0 and Port 1 links were down for a period exceeding the Link Down Timeout (LDTO) If the initiator has connection to the target, there will be event log entries from the disk subsystem indicating that the drives were lost. If any I/Os were in progress, the system may see I/O errors or failures.	Check the links to the OneConnect UCNA. If the link is reestablished, any sessions that existed previously will be reestablished and the devices will be available for I/O.
Both Port 0 and Port 1 links are down.	Check the links to the OneConnect UCNA.

Additional iSCSI Driver Messages

The following error messages are returned when you specify illegal options when loading the driver.

"WARNING: dic value = %d out of range. Valid Range is 0-1. Using Default Value = 1"

"WARNING: eto value = %d out of range. Valid Range is 0-30. Using Default Value = 30"

"WARNING: ldto value = %d out of range. Valid Range is 0-30. Using Default Value = 30"

"WARNING: ios_per_ctrl value = %d out of range. Valid Range is 1-512. Using Default Value = 512"

"WARNING: max_io_size value = %d out of range. Valid Range is 4-256. Using Default Value = 256"

"WARNING: tmf reset value = %d out of range. Valid Range is 1-3. Using Default Value = 1"

"WARNING: ddm value = %d out of range. Valid Range is 0-1. Using Default Value = 0"

"WARNING: dic value = %d out of range. Valid Range is 0-1. Using Default Value = 1"

%d represents a signed integer outside the valid range. The driver will return a number in the actual warning message,

Any other messages will return in the following form"

"BE2ISCSI: FUNCTION_NAME:LINE:MESSAGE"

For example:

"be2iscsi:1088: kmalloc failed."

You will be requested to find the function FUNCTION_NAME at line LINE in the source.

APPENDIX DHCP Recommendations

If you use a DHCP (Dynamic Host Configuration Protocol) server to obtain an IP address for the OneConnect UCNA, Emulex recommends that you set up a reservation. A reservation assigns a specific IP address based on the MAC address of the OneConnect UCNA. If you do not reserve an IP Address through DHCP, then you must set the lease length for the OneConnect UCNA IP address to unlimited to prevent the IP-address lease from expiring.

EMULEX END USER LICENSE AGREEMENT

Any software and documentation (respectively "Software" and "Documentation") provided under this End User License Agreement ("License Agreement") are the copyrighted works of Emulex Corporation ("Emulex") or its licensors. Software may include firmware, drivers and boot code. The Software and Documentation are licensed, not sold. Emulex or its licensors retain all right, title and interest, including without limitation all intellectual property rights, in and to all copies, regardless of form or media, of the Software and Documentation. The Software or Documentation includes any revisions or updates.

Emulex grants the party receiving the Software or Documentation (the "Licensee") a personal, worldwide, nontransferable, nonexclusive, royalty-free right and license to use the Software or Documentation only with Emulex hardware products and without circumventing any security or rights management feature. Any rights not expressly granted herein are reserved. This License Agreement terminates when the Licensee no longer rightfully possesses the associated Emulex hardware product(s), ceases using the Software and Documentation, or breaches any provision of this License Agreement. The Licensee hereunder shall not (1) reverse engineer, reverse compile or reverse assemble all or any part of the Software, (2) disseminate performance information or analysis to any third party, other than solely for product support purposes, from any source relating to the Software, or cause or permit others to do either of both of the foregoing. The Licensee agrees to prevent any unauthorized copying of the Software. In addition, permission to use Documentation is granted, provided that (1) the below copyright notice and this permission notice appears on all copies, (2) use of such Documentation is for informational and non-commercial or personal use only, (3) the Documentation is not copied or posted on any network computer or broadcast in any media to make it available to third parties, and (4) no modification of any Documentation is made. Any use, reproduction or redistribution of the Software or Documentation not in accordance with the License Agreement is expressly prohibited by law, and may result in severe civil and criminal penalties.

The Licensee accepts the terms of this License Agreement by downloading or initial use of a product containing the Software or Documentation.

Copying or reproduction of the Software or Documentation to any other server or location for further reproduction or redistribution to third parties is expressly prohibited, unless specifically authorized in writing by Emulex. THE SOFTWARE IS WARRANTED, IF AT ALL, ONLY ACCORDING TO THE TERMS OF THE LICENSE AGREEMENT. EXCEPT AS SPECIFIED IN THE LICENSE AGREEMENT, EMULEX HEREBY DISCLAIMS ALL EXPRESS, IMPLIED, AND STATUTORY WARRANTIES WITH REGARD TO THE SOFTWARE, INCLUDING, BUT NOT LIMITED TO, ALL WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE AND NON-INFRINGEMENT. EMULEX AND ITS LICENSORS MAKE NO REPRESENTATIONS ABOUT THE SUITABILITY FOR ANY PURPOSE OF THE INFORMATION CONTAINED IN THE DOCUMENTATION. ALL SUCH DOCUMENTATION IS PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND. EMULEX AND ITS LICENSORS HEREBY DISCLAIM ALL EXPRESS, IMPLIED, AND STATUTORY WARRANTIES WITH REGARD TO THIS INFORMATION, INCLUDING ALL WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE AND NON-INFRINGEMENT. The Documentation could include technical inaccuracies or typographical errors. Emulex and its licensors reserve the right to make changes to the Software or Documentation described herein at any time without notice. IN NO EVENT SHALL EMULEX AND ITS LICENSORS BE LIABLE FOR ANY SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES OR ANY DAMAGES WHATSOEVER RESULTING FROM LOSS OF USE, DATA OR PROFITS, WHETHER IN AN ACTION OF CONTRACT, NEGLIGENCE OR OTHERWISE, ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF SOFTWARE, DOCUMENTATION, OR PROVISION OF OR FAILURE TO PROVIDE SERVICES.

RESTRICTED RIGHTS LEGEND. The Software may be provided to units or agencies of the U.S. government only as "commercial computer software," "restricted computer software," or with "restricted rights" as defined in

applicable regulations, and may not be provided as source code. Manufacturer is Emulex Design & Manufacturing Corporation, 3333 Susan St., Costa Mesa, CA 92626.

TRADEMARKS; COPYRIGHT NOTICE. Emulex or Emulex products referenced herein are either trademarks or registered trademarks of Emulex. Copyright © 2006 Emulex or its licensors. All rights reserved.

CHOICE OF LAW; SEVERABILITY. The laws of the State of California, without giving effect to its conflicts of laws principles, govern all matters arising out of or relating to this License Agreement, including, without limitation, its validity, interpretation, construction, performance, and enforcement. If any term or condition of this Agreement is held invalid, illegal or unenforceable by a court of competent jurisdiction, all the other terms and conditions shall survive.

ENTIRE AGREEMENT. Emulex may modify this License Agreement from time to time. Any amendments or modifications may be provided to you through on-line notice. This is the complete agreement between the parties regarding the subject matter hereof, and, except as expressly permitted hereunder, may be changed only by a written agreement executed by authorized representatives of the parties.
